Regulatory Mechanisms Of Intracellular Membrane Transport:

Regulatory Mechanisms of Intracellular Membrane Transport Sirkka Keränen, Jussi Jäntti, 2004-08-27 This book deals with the molecular mechanisms of membrane trafficking a central eukaryotic cell biological process In the post genomic era many essential molecules involved in intracellular membrane protein transport are emerging A huge task now is to compile the molecular networks that govern these processes Understanding of regulatory processes and participating molecules are likely to reveal global cellular regulatory circuits that couple membrane trafficking with other cellular functions Such cell biological features are only starting to emerge This book puts special emphasis on such mechanisms and processes The contents discusses the role of coat proteins tethering complexes small rab GTPases Sec1 family proteins and SNARE molecule phosphorylation in exocytosis endocytosis and membrane fusion In addition the role of lipids in vesicle formation and membrane fusion and some specialized cell biological denovo membrane generation processes are discussed

Advances in Comparative and Environmental Physiology F. Lang, D. Häussinger, 2012-12-06 One of the prerequisites for survival is the ability of cells to maintain their volume Thus during the course of evolution cells have learned a variety of strategies to achieve volume homeostasis This volume regulatory machinery involves regulation of both cellular metabolism and cellular transport and is exploited by hormones and transmitters to regulate cellular function This book to illustrates the complex interplay of cell volume regulatory mechanisms and cellular function in a variety of tissues However our knowledge is still far from being conclusive and the present collection of reviews is thought to foster further experimental efforts to unravel the role of cell volume in the integrated function of cells
