Thornburg,Massimo Nepi,2019-08-27 The number of currently known described and accepted plant species is ca 374 000 of which approximately 295 00 79% are angiosperms Almost 90% of this huge number of flowering plants is pollinated by animals mostly insects via nectar mediated interactions Notably three fourths of the leading global crop plants produce nectar and are animal pollinated which is estimated to account for one third of human food resources Nectar can also be produced on tissues outside of flowers by so called extrafloral nectaries and commonly mediate interactions with body guard ants and other pugnacious insects that defend the plant from herbivores Extrafloral nectar is present in almost 4 000 plant species a majority of them in the angiosperms This brief summary on the occurrence of nectar in the plant kingdom is just to highlight that nectar has a fundamental role in two basal functions that allow the maintenance of our ecosystems sexual plant reproduction and protection of plants from herbivory Despite playing essential ecological and evolutionary functions our current knowledge about nectar is largely incomplete however new research directions and perspectives on nectaries and nectars have arisen in recent years In the last two decades there were only a few moments in which nectar was the main character in international meetings or in published books In 2002 the first and only international meeting Nectar and nectary from biology to biotechnology dedicated exclusively to nectar and nectaries was held in Italy Montalcino Siena and in 2003 the proceedings were published in a special volume of Plant Systematics and Evolution 238 issue 1 4 In 2007 the book Nectar and Nectaries was published Springer with most of the contributions provided by authors that attended the meeting in Italy Another book dedicated to nectar was published in 2015 Nectar Production Chemical Composition and Benefits to Animals and Plants Nova Science Publishers covering aspects mainly related to nectar chemical composition and plant pollinator interactions Similarly symposia focused on nectar have been organized within the International Botanical Congress in 2011 and 2017 Considering that the last few years has yielded essential developments in the understanding of nectar biology we thought now is the moment to further stimulate research on this important topic This aim has been met through 18 papers published in our Research Topic New Perspectives on the Biology of Nectaries and Nectars with subjects spanning evolution and ecology to nectar chemistry and nectary structure Pollen and Pollination Amots Dafni,Michael Hesse,Ettore Pacini,2012-12-06 Pollen studies make important contributions nature into three main themes pollen struc to our knowledge in many interdisciplinary ture and constituents pollen evolutionary arenas Pollen identification is widely used in ecology and

Letters from the Hive Stephen Buchmann, Banning Repplier, 2005-04-26 They work hard are devoted to family love sex and know the importance of a good piece of real estate. Honey bees and the daily workings of their close knit colonies are one of nature's great miracles. And they produce one of nature's greatest edible bounties honey. More than just a palate pleaser honey was once an offering to the gods a preservative and a medicine whose sought after curative powers were detailed in ancient texts and are being rediscovered by modern medical science. In Letters from the Hive Prof Stephen Buchmann takes us into the hive nursery honey factory queen's inner sanctum and out to the world of backyard gardens open fields and deserts in full bloom where the age old sexual dance between flowers and bees makes life on earth as we know it possible. Hailed for their hard work harmonious society and mistakenly for their celibacy bees have a link to our species that goes beyond biology. In Letters from the Hive Buchmann explores the fascinating role of bees in human culture and mythology following the honey hunters of native cultures in Malaysia the Himalayas and the Australian Outback as they risk life and limb to locate a treasure as valuable as any gold. To contemplate a world without bees is to imagine a desolate place culturally and biologically and Buchmann shows how with each acre of land sacrificed to plow parking lot or shopping mall we inch closer to what could become a chilling reality. He also offers honey based recipes cooking tips and home remedies further evidence of the gifts these creatures have bestowed on us. Told with wit wisdom and affection and rich with anecdote and science Letters from the Hive is nature writing at its best. This is natural history to be treasured a sweet tribute that buzzes with life.
