Schleiss, 2013-10-21. Dam engineering is currently experiencing a strong revival of labyrinth-oriented weirs. Labyrinth weirs with a repetitive constructional character and an increased specific discharge capacity are a very good technical/economical compromise. The concept of Piano Key Weir (PKW) with alveoli developed in overhangs from a reduced support area enables the installation of non-linear crests at the top of concrete dams. As a result, it eliminates the main drawback of classical labyrinth weirs and enables their use to rehabilitate numerous existing dams. Since the first implementation of piano key weirs by Electricité de France on Goulours dam, France, in 2006, at least eight PKWs have been built in France, Vietnam, and Switzerland. Their operation over a few years has already provided the first prototype data. Other projects are under study, construction, or planning in various countries. On another hand, research programs are under progress all over the world. Following a first edition in 2011, *Labyrinth and Piano Key Weirs II* (PKW 2013) collects up-to-date contributions from people with various backgrounds from engineers and researchers to academics. Summarizing the last developments on labyrinth-oriented weirs, the book constitutes the state of the art in research and application of piano key weir solutions and will be invaluable to professionals and scientists interested in Dams Engineering. *Environmental Vibrations and Transportation Geodynamics*, Xuecheng Bian, Yunmin Chen, Xiaowei Ye, 2017-06-27. This book includes keynote presentations, invited speeches, and general session papers presented at the 7th International Symposium on Environmental Vibration and Transportation Geodynamics, formerly the International Symposium on Environmental Vibration, held from October 28 to 30, 2016, at Zhejiang University, Hangzhou, China. It discusses topics such as the dynamic and cyclic behaviors of soils, dynamic interaction of vehicle and transportation infrastructure, traffic-induced structure and soil vibrations, and wave propagation, soil structure dynamic interaction problems in transportation, environmental vibration analysis and testing, vehicle machine and human-induced vibrations, monitoring, evaluation, and control of traffic-induced vibrations, transportation foundation deformation and deterioration induced by vibration, structural safety, and serviceability of railways, metros, roadways, and bridges, and application of geosynthetics in transportation infrastructure. It is a valuable resource for government managers, scientific

researchers and engineering professionals engaged in the field of geotechnical and transportation engineering
