The Living Cosmos Chris Impey, 2007-12-11 Astrobiology the study of life in space is one of today's fastest growing and most popular fields of

science In this compelling accessible and elegantly reasoned new book award winning scholar and researcher Chris Impey explores the foundations of this rapidly developing discipline where it s going and what it s likely to find The journey begins with the earliest steps of science gaining traction through the revelations of the Renaissance including Copernicus s revolutionary declaration that the Earth was not the center of the universe but simply a planet circling the sun But if Earth is not the only planet it is so far the only living one that we know of In fascinating detail The Living Cosmos reveals the incredible proliferation and variety of life on Earth paying special tribute to some of its hardest life forms extremophiles a dizzying array of microscopic organisms compared in Impey s wise and humorous prose to superheroes that can survive extreme heat and cold live deep within rocks or thrive in pure acid From there Impey launches into space where astrobiologists investigate the potential for life beyond our own world Is it to be found on Mars the death planet that has foiled most planetary missions and which was wet and temperate billions of years ago Or on Venus Earth s evil twin where it rains sulfuric acid and whose heat could melt lead Whoever named it after the goddess of love had a sorry history of relationships The answer may lie in a moon within our Solar System or it may be found in one of the hundreds of extra solar planets that have already been located The Living Cosmos sees beyond these explorations and imagines space vehicles that eschew fuel for solar or even nuclear powered rockets all sent by countries motivated by the millions to be made in space tourism But The Living Cosmos is more than just a riveting work about experiment and discovery It is also an affecting portrait of the individuals who have devoted their lives to astrobiology Illustrated throughout The Living Cosmos is a revelatory book about a science that is changing our view of the universe a mesmerizing guide to what life actually means and where it may or may not exist and a stunning work that explains our past as it predicts our future From the Hardcover edition

Mirmalek,2020-04-07 An examination of how the daily work of NASA s Mars Exploration Rovers was organized across three sites on two planets using local Mars time In 2004 mission scientists and engineers working with NASA s Mars Exploration Rovers MER remotely operated two robots at different sites on Mars for ninety consecutive days An unusual feature of this successful mission was that it operated on Mars time the daily work was organized across three sites on two planets according to two Martian time zones In Making Time on Mars Zara Mirmalek shows that this involved more than a resetting of wristwatches the team s struggle to synchronize with Mars time involved technological and communication breakdowns informal workarounds and extra work to support the technology that was intended to support people Her account of how NASA created an entirely new temporality for the MER mission offers insights about the assumptions behind the organizational relationship between clock time and work Mirmalek herself a member of the mission team offers an insider s view of the MER workplace and community She describes the discord among MER s multiple temporalities and examines issues of professional identity that helped shape the experience of working according to Mars time Considering time and work relationships through a multidisciplinary lens Mirmalek shows how contemporary and historical human technology relationships inform assumptions about the unalterability of clock time She argues that the organizational connection between clock time and work although still operational is outdated **The 24-Hour Genius** Eric Epstein,2013-06-18 If a
