**Technology in Holistic Community Development** Alexander Zahnd, 2014-01-25 This thesis documents almost twenty years of the author's work on the development and implementation of a new approach to holistic community development in remote and disadvantaged villages in Nepal It describes the theoretical basis of the work the main research activities and the practical outcomes of the implemented programs One of the fundamental cornerstones of holistic community development is the provision of appropriate and sustainable solutions for the long term development of local communities This requires that people's own identified needs be recognized and addressed in partnership with them in holistic ways The author explains the many synergies that result from this holistic approach to community development Another cornerstone of his approach is to utilise the communities locally available renewable resources for long term sustainable development One of the key findings of the thesis is that improved access to energy services such as cooking with a smokeless metal stove in a clean indoor environment basic indoor lighting and increased food production and safe food storage through a greenhouse and a solar drier respectively need to be at the very heart of any long term holistic community development project The thesis demonstrates that tapping into locally available renewable energy resources and converting them through contextualized and locally manufactured renewable energy technologies has a central role in long term holistic community development programs Such programs are successful because they provide both appropriate technologies and life changing experiences for the local users involved Bioprocessing for Value-Added Products from Renewable Resources Shang-Tian

Yang, 2011-08-11 Bioprocessing for Value Added Products from Renewable Resources provides a timely review of new and unconventional techniques for manufacturing high value products based on simple biological material The book discusses the principles underpinning modern industrial biotechnology and describes a unique collection of novel bioprocesses for a sustainable future This book begins in a very structured way It first looks at the modern technologies that form the basis for creating a bio based industry before describing the various organisms that are suitable for bioprocessing from bacteria to algae as well as their unique characteristics This is followed by a discussion of novel experimental bioprocesses such as the production of medicinal chemicals the production of chiral compounds and the design of biofuel cells The book concludes with examples where biological renewable resources become an important feedstock for large scale industrial production This book is suitable for researchers practitioners students and consultants in the bioprocess and biotechnology fields and for others who are interested in biotechnology engineering industrial microbiology and chemical engineering Reviews the principles underpinning modern industrial biotechnology Provides a unique collection of novel bioprocesses for a sustainable future Gives examples of economical use of renewable resources as feedstocks Suitable for both non experts and experts in the bioproduct industry Tensile Fracturing in Rocks Dov Bahat, Avinoam Rabinovitch, Vladimir Frid, 2005-08-31 Tensile

Fracturing in Rocks presents field observations on fracturing of sedimentary rocks and granite outcrops from various provinces in three continents. It also combines results of recent experiments conducted at different laboratories around the world with current theories on fracturing. In treating faults, this book limits itself to faults that are associated with joint sets produced by definable causes and occasionally to cases where interaction between the two types of fracture faults and joints is not clear. The book's subject matter is divided over six chapters which are briefly described below. Chapter 1 summarizes current key concepts in fracture physics. It starts with a presentation of the elastic theory of fracture and concentrates on the results of linear elastic fracture mechanics. The chapter touches also upon other fracture properties e.g. crack nucleation, dynamic fracturing and slow fracturing processes. Nucleation is treated by statistical mechanics methods incorporating modern approaches of thermal and fiber bundle processes. The analyses of dynamic fracturing and slow fracturing focus on the differences as compared to the linear elastic approach. The controversy in interpreting experimental dynamic results is highlighted as are the surface morphology patterns that emerge in fracturing and the non-Griffith crack extension criterion in very slow fracturing processes.

Survey of Semiconductor Physics, Electrons and Other Particles in Semiconductors Karl W. Böer, 2002-04-05. A comprehensive treatment of the fundamentals of semiconductor physics and materials science. The first edition of the Survey of Semiconductor Physics set the standard for the multifaceted exploration of semiconductor physics. Now Dr Karl Böer, one of the world's leading experts in solid state physics with assistance from a team of the field's top researchers, expands this coverage in the Second Edition. Completely updated and substantially expanded, the Survey of Semiconductor Physics Second Edition covers the basic elements in the entire field of semiconductor physics, emphasizing the materials and surface science involved. The Second Edition uses similar theoretical approaches and analyses for the basic material classes: crystalline, amorphous, quantum structures and organics. The first volume provides thorough coverage of the structure of semiconductors including Phonons, Energy bands, Photons as they interact with the semiconductor and other particles, Defects, Generation and recombination, Kinetics. In both volumes, extensive appendices simplify searches for important formulae and tables. An elaborate word index and reference listings allow readers to use the reference in multiple ways to discover expanding literature, to explore similarities and connecting principles in other fields, to find out how others in adjacent fields came up with intriguing solutions to similar problems, and to obtain a broad overview of the entire field of semiconductor physics.
