Setting Of Fibres And Fabrics:

The Setting of Fibres and Fabrics J. W. S. ed Hearle, 1982 Textile Processing and Properties T.L. Vigo, 2013-10-22

The type and amount of textile products have greatly proliferated over the last decade. Concomitant textile processing to improve the properties and ultimate performance has also undergone dramatic changes. Ready availability of instrumentation, computers, lasers, and integration of these advances with similar progress in polymer material science have led to the need for a unified discussion on these topics. The current book concisely discusses all aspects of textile processing, modification, and performance for four major topics: preparation by fiber type, dyeing and printing, dye type, theory and synthesis, dye classification by structure and application, improving functional and aesthetic textile properties, physical, chemical, and physicochemical processes and concepts, and performance, chemical analysis, instrumental methods, physical, chemical, biological, multiple influences, and standard tests. A detailed and logical progression from the initial purification of textiles to their performance and care is described. The book will be useful as a text for textile/polymer courses at undergraduate and graduate levels and as a comprehensive source of information for textile scientists, engineers, manufacturers, retailers, and others with an interest in textile products.

Fibre & Fabric, 1929 Textile Preparation and Dyeing A K Roy Choudhury, 2006-01-09

Dealing with the classical processes for textile dyeing as well as with the preparation of the material before dyeing, this book also includes recent technological developments. Both theoretical and the practical aspects are covered in order to enable the students and the technicians to understand the processes clearly.

Textile Chemicals Katia Lacasse, Werner Baumann, 2004

This data and factbook contains state of the art information on the environmental aspects of 2 500 chemicals currently used in the textile industry worldwide. The authors have worked closely with industrial practitioners and managers of textile plants to ensure that only state of the art science and technology are included. The texts preceding the extended tables present comprehensive overviews of the processes presently in use as well as of important and relevant governmental regulations. The data sheet for each chemical spans carefully selected relevant environmental and production related data. In addition, textile engineers and specialists involved in the risk assessment and control of these chemicals will find that the overviews given on each chemical, its field of application, and its function in production processes make this volume a valuable tool for their frequent reference.
