Post-Lesion Neural Plasticity Hans Flohr, 2012-12-06 Neural networks are not rigidly wired but rather highly plastic structures the functional architecture of which can be actively reorganized in response to external or internal events Lesions of such networks induce plastic processes which in time may lead to a recovery of the initially disrupted function This type of neural plasticity is the main focus of the book which presents a broad spectrum of experimental paradigms for lesion induced plasticity as in the spinal cord the vestibular oculomotor visual and olfactory system the cerebellum and the cerebral cortex including recent methodological developments Concepts and perspectives in understanding neural plasticity are reported in reviews and original research reports and are thoroughly discussed *The Lancet*, 1897 **Journal of the Royal Army**

Systems H. Flohr, W. Precht, 2013-12-11 Sensorimotor systems are not rigidly wired predetermined networks but rather highly plastic structures that learn and modify their entire performance in response to changes in external or internal conditions Lesions or distortions of the system's input which initially cause a functional disorganization induce an active reorganization which often leads to a recovery of function Examples of lesion induced neural plasticity have been known for some hundred years however an awareness of their value as research tools is relatively new This current interest is a consequence of rapidly changing ideas concerning the nature of CNS organization Out of these concepts are emerging which describe neural nets as modifiable highly dynamic self organizing structures This trend is clearly reflected in this volume which contains the proceedings of a symposium held in Bremen in July 1980 as a satellite meeting of the XXVIIIth International Congress of Physiological Sciences The first part of this conference was devoted to some general aspects of

plasticity discussing the current theories of functional recovery as well as morphological neurochemical physiological molecular and ontogenetic aspects The second part dealt with lesion induced plasticity in specific sensorimotor systems of the spinal cord brain stem and cerebral cortex **Duration of Passive Immunity** A.
