Several Complex Variables and the Geometry of Real Hypersurfaces John P. D'Angelo, 2019-07-16 Several Complex Variables and the Geometry of Real Hypersurfaces covers a wide range of information from basic facts about holomorphic functions of several complex variables through deep results such as subelliptic estimates for the Neumann problem on pseudoconvex domains with a real analytic boundary The book focuses on describing the geometry of a real hypersurface in a complex vector space by understanding its relationship with ambient complex analytic varieties You will learn how to decide whether a real hypersurface contains complex varieties how closely such varieties can contact the hypersurface and why it is important The book concludes with two sets of problems routine problems and difficult problems many of which are unsolved Principal prerequisites for using this book include a thorough understanding of advanced calculus and standard knowledge of complex analysis in one variable Several Complex Variables and the Geometry of Real Hypersurfaces will be a useful text for advanced graduate students and professionals working in complex analysis [L2 Approaches in Several Complex Variables](#)

Takeo Ohsawa, 2018-11-28 This monograph presents the current status of a rapidly developing part of several complex variables motivated by the applicability of effective results to algebraic geometry and differential geometry Special emphasis is put on the new precise results on the L^2 extension of holomorphic functions in the past 5 years In Chapter 1 the classical questions of several complex variables motivating the development of this field are reviewed after necessary preparations from the basic notions of those variables and of complex manifolds such as holomorphic functions pseudoconvexity differential forms and cohomology In Chapter 2 the L^2 method of solving the $\bar{\partial}$ equation is presented emphasizing its differential geometric aspect In Chapter 3 a refinement of the Oka Cartan theory is given by this method The L^2 extension theorem with an optimal constant is included obtained recently by Z Bocklandt and separately by Q A Guan and X Y Zhou In Chapter 4 various results on the Bergman kernel are presented including recent works of Maitani Yamaguchi Berndtsson Guan Zhou and Berndtsson Lempert Most of these results are obtained by the L^2 method In the last chapter rather specific results are discussed on the existence and classification of certain holomorphic foliations and Levi flat hypersurfaces as their stable sets These are also applications of the L^2 method obtained during the past 15 years **Complex Analysis and**

holomorphic bundle by an increasing order Then he obtains the polarized mixed twistor structure from the data on the divisors As one of the applications he obtains the norm estimate of holomorphic or flat sections by weight filtrations of the monodromies As another application the author establishes the correspondence of semisimple regular holonomic D modules and polarizable pure imaginary pure twistor D modules through tame pure imaginary harmonic bundles which is a conjecture of C Sabbah Then the regular holonomic version of M Kashiwara s conjecture follows from the results of Sabbah and the author
