## Curricula and Instructional Procedures for Severely Handicapped Students

*Doug Guess and Mary Jo Noonan*

Educational instruction among severely handicapped students is an effort barely 15 years old. During this brief history, curriculum development has followed several paths in attempting to identify content and methodology that will meet the needs of a population having severe skill deficits, maladaptive behaviors, and slow rates of achievement. After reviewing and analyzing the major curricula and instructional procedures that have evolved from various theoretical positions, we will give some suggestions for redirections in the field.

### THE DEVELOPMENTAL APPROACH

Traditionally, curricula for the severely handicapped have been developmental — designed to replicate the normal sequence of development among handicapped students. Justification for the developmental approach rests on at least three assumptions: 1) normal development constitutes the most *logical* ordering of behaviors in a curriculum; 2) many behaviors within normal development are *prerequisite* behaviors; and 3) behaviors acquired at a particular age by a normal child are *appropriate* objectives for a severely handicapped student at the same level of development (Baldwin, 1976; Haring & Bricker, 1976; Stephens, 1977). On these premises, a multitude of chronologically sequenced behavior scales have been put forth as curricula for the severely handicapped. These curricula describe the "what to teach" and the order in which it should be taught.

### Developmental Scales

Normal development serves as the outline of content in the developmental curriculum. Content is sequenced within behavior domains (e.g., gross motor, fine motor, language, social, and self-help) that function as both an assessment and the objectives of the curriculum. Because the assessment and objectives are one and the same, the curricula have been referred to as "assessment-linked" (Bricker, Bricker, Iacino, & Dennison, 1976; Gentry & Adams, 1978).
