Gerald E. Flueckiger, 2012-12-06 Information theory cybernetics and the theory of finite automata are used to model learning by doing bounded rationality routine behavior and the formation of teams The non neoclassical characterization of production developed in this book ignores the usual quantitative relationships between inputs and outputs and instead views production strictly as a problem of control and communication The motivation for this unconventional characterization of production comes from Schumpeter's critique of neoclassical economic theory Schumpeter argued that neoclassical economic theory and the habits of thought engendered by it was the major obstacle to acquiring an understanding of technological change The non neoclassical characterization of production developed in this book is in keeping with how economic historians describe specific technological changes and how they write technological histories about particular machines firms or industries      *American Material Culture* Edith Mayo, 1984 The use of objects as source materials for scholarship has been increasingly legitimized by the growth of American Studies programs which are now in the forefront in their work with objects The use of the museum as a primary resource is currently being given a position of increasing importance in American Studies scholarship      **The Path to Mechanized Shoe Production in the United States** Ross

Thomson, 2018-08-25 In 1800 shoes in the United States were made by craftsmen each trained to create an entire shoe A century later shoes were mass produced in factories employing dozens of machines and specialized workers Ross Thomson describes this transition from craft to mechanized production in one of the largest American industries of the nineteenth century Early shoe machinery originated through innovations made by shoemakers tailors and especially machinists It continued to evolve through a process of learning by selling in which sales of one generation of machines led to technological learning and ongoing invention by those who used serviced and sold them As a result of this process the mechanization of the shoe industry and the manufacturers of the machinery it used including such firms as Singer and United Shoe Machinery evolved together In researching the process of industrialization Thomson examined nearly 8 000 patents Comparing the patent information with directories for more than eighty American cities he was able to find out who the inventors were who employed them how many patents they held and the extent to which their inventions were used Originally published in 1989 A UNC Press Enduring Edition UNC Press Enduring Editions use the latest in digital technology to make available again
