Crisis Frederick Schram, Carel von Vaupel Klein, 2023-07-03 This important and extensive volume presents part of the Proceedings of the Fourth International Crustacean Congress held in Amsterdam in 1998 As the title implies Crustaceans and the Biodiversity Crisis was the general underlying theme of all contributions at the congress With the turn of the century someone ought to assess the balance of our natural environment and of the various branches of biology that study its rapidly declining diversity From the five subthemes covered at the conference those of 1 Diversity in Time and Space including Systematics Phylogeny and Palaeontology 2b Biogeography 3c Larvae and 4 Physiology and Biochemistry including Molecular Biology and Genetics are represented in this volume along with a few contributions from other subthemes e g 2a Invasive Crustacea 3a Ecology 3b Behaviour and 5 Fisheries and Aquaculture The book is primarily meant for scientists working at institutes involved in research on the group Crustacea marine freshwater or terrestrial and or the disciplines covered Individual carcinologists working on one of the themes discussed in this volume will find a wealth of interesting and timely contributions as will other scientists working in marine or freshwater biology or in soil ecology Evolutionary

Developmental Biology of Crustacea Gerhard Scholtz, 2003-06-01 Crustaceans due to the great diversity of their body organization segmentation patterns tagmatization limb types larval forms cleavage and gastrulation modes are highly desirable for the study of questions at the interface of evolution and development Modern interest in evolutionary developmental biology evo devo rests on the molecular genetic approach and a variety of molecular techniques have proven fruitful when performed on crustaceans Evolutionary Developmental Biology of Crustacea presents a comprehensive treatment of all aspects of the field beginning with a discussion of the implications of the typological Bauplan and phylum concepts versus historical concepts such as ground pattern and monophylum for the formulation of conceptual questions in evo devo Following this the authors present the results of Hox gene expression in various crustacean taxa aspects of segment formation at the cellular and genetic levels the formation of segmental structures such as neurons ganglia and limbs and the role of morphological ontogenetic characters in resolving phylogenetic relationships By covering so many general aspects of crustacean development morphology and evolution Evolutionary Developmental Biology of Crustacea serves as an indispensable reference for developmental and evolutionary biologists investigating the role of genetics in evolution and development **Advances in Marine and Antarctic Science** , 2002 Contributed articles *Developmental Biology and Larval Ecology* Klaus Anger, Steffen Harzsch, Martin Thiel, 2020-05-30 This is the seventh volume of a ten volume series on The Natural History of the Crustacea Chapters in this volume synthesize our current understanding of early crustacean

development from the egg through the embryonic and larval phase The first part of this book focuses on the elemental aspects of crustacean embryonic development The second part of the book provides an account of the larval phase of crustaceans and describes processes that influence the development from hatching to an adult like juvenile The third and final part of the book explores ecological interactions during the planktonic phase and how crustacean larvae manage to find food navigate the dynamic water column and avoid predators in a medium that offers few refuges Advances in Marine Antifouling Coatings and Technologies Claire Hellio, Diego Yebra, 2009-05-22 Marine biofouling can be defined as the undesirable accumulation of microorganisms algae and animals on structures submerged in seawater From the dawn of navigation marine biofouling has been a major problem for shipping in such areas as reduced speed higher fuel consumption and increased corrosion It also affects industries using off shore structures such as oil and gas production and aquaculture Growing concerns about the environmental impact of antifouling coatings has led to major new research to develop more environmentally friendly alternatives Advances in marine antifouling coatings and technologies summaries this wealth of research and its practical implications This book is divided into four sub sections which discuss marine fouling organisms and their impact testing and development of antifouling coatings developments in chemically active marine antifouling technologies and new surface approaches to the control of marine biofouling It provides an authoritative overview of the recent advances in understanding the biology of fouling organisms the latest developments on antifouling screening techniques both in the field and in the laboratory research on safer active compounds and the progress on nontoxic coatings with tailor made surface properties With its distinguished editors and international team of contributors Advances in marine antifouling coatings and technologies is a standard reference for manufacturers of marine antifouling solutions the shipping industry oil and gas producers aquaculture and other industries using offshore structures and academics researching this important area Assesses marine antifouling organisms and their impact including a historical review and directions for future research Discusses developments in antifouling coatings examining chemically active and new surface approaches Reviews the environmentally friendly alternative of safer active compounds and the progress of non toxic compounds Atlas of Crustacean Larvae Joel W. Martin, Jørgen Olesen, Jens T. Høeg, 2014-07-01 An illustrated guide to the sweeping diversity of crustacean larval forms Winner of the CHOICE Outstanding Academic Title of the Choice ACRL Crustaceans familiar to the average person as shrimp lobsters crabs krill barnacles and their many relatives are easily one of the most important and diverse groups of marine life Poorly understood they are among the most numerous invertebrates on earth Most crustaceans start life as eggs and move through a variety of morphological phases prior to maturity In Atlas of Crustacean Larvae more than 45 of the world s leading crustacean researchers explain and illustrate the beauty and complexity of the many larval life stages Revealing shapes that are reminiscent of aliens from other worlds often with bizarre modifications for a planktonic life or for parasitization including in some cases bulging eyes enormous spines and aids for flotation and swimming the abundant

illustrations and photographs show the detail of each morphological stage and allow for quick comparisons The diversity is immediately apparent in the illustrations spikes that deter predators occur on some larvae while others bear unique specializations not seen elsewhere and still others appear as miniature versions of the adults Small differences in anatomy are shown to be suited to the behaviors and survival mechanisms of each species Destined to become a key reference for specialists and students and a treasured book for anyone who wishes to understand the invertebrate backbone of marine ecosystems Atlas of Crustacean Larvae belongs on the shelf of every serious marine biologist

Marine Plankton Claudia Castellani, Martin Edwards, 2017-09-01 A thorough understanding of planktonic organisms is the first step towards a real appreciation of the diversity biology and ecological importance of marine life A detailed knowledge of their distribution and community composition is particularly important since these organisms are often very delicate and sensitive to change and can be used as early indicators of environmental change Natural and man induced modification of the environment can affect both the distribution and composition of plankton with important ecological and economic impacts Marine Plankton provides a practical guide to plankton biology with a large geographic coverage spanning the North Sea to the north eastern Atlantic coast of the USA and Canada The book is divided into three sections an overview

of plankton ecology an assessment of methodology in plankton research covering sampling preservation and counting of samples and a taxonomic guide richly illustrated with detailed line drawings to aid identification This is an essential reference text suitable for senior undergraduate and graduate students taking courses in marine ecology particularly useful for fieldwork as well as for professional marine biologists It will also be of relevance and use to environmental scientists conservation biologists marine resource managers environmental consultants and other specialised practitioners

Functional Surfaces in Biology Stanislav N. Gorb, 2009-10-13 This book is devoted to the rapidly growing area of science dealing with structure and properties of biological surfaces in their relation to particular functions This volume written by a team of specialists from different disciplines covers various surface functions such as protection defense water transport anti wetting self cleaning light reflection and scattering and acoustics Because biological surfaces have a virtually endless potential of technological ideas for the development of new materials and systems inspirations from biology could also be interesting for a broad range of topics in surface engineering

Decapod Crustacean Phylogenetics Joel W. Martin, Keith A. Crandall, Darryl L. Felder, 2016-04-19 Decapod crustaceans are of tremendous interest and importance evolutionarily ecologically and economically There is no shortage of publications reflecting the wide variety of ideas and hypotheses concerning decapod phylogeny but until recently the world's leading decapodologists had never assembled to elucidate and discuss relationships among

The Biology and Fisheries of the Slipper Lobster Kari L. Lavalli, Ehud Spanier, 2007-01-24 Written by international experts *The Biology and Fisheries of the Slipper Lobster* provides comprehensive coverage of the known biology ecology behavior physiology evolutionary history and genetics of the numerous species in the family Scyllaridae It covers fishing methods and regulations size and composition of catches fisheries management

Crustacea and Arthropod Relationships Stefan Koenemann, Ronald Jenner, 2005-04-27 Compared to other arthropods crustaceans are characterized by an unparalleled disparity of body plans Traditionally the specialization of arthropod segments and appendages into distinct body regions has served as a convenient basis for higher classification however many relationships within the phylum Arthropoda still remain controversial

Phylogeography and Population Genetics in Crustacea Christoph Held, Stefan Koenemann, Christoph D. Schubart, 2016-04-19 Recently technological progress and the rise of DNA barcoding efforts have led to a significant increase in the availability of molecular datasets on intraspecific variability Carcinologists and other organismal biologists who want to use molecular tools to investigate patterns on the scale of populations face a bewildering variety of genetic m

Evolution and Phylogeny of Pancrustacea Frederick R. Schram, Stefan Koenemann, 2021-11-02 The scientific understanding of arthropod phylogeny and evolution has changed significantly in recent decades One of the most momentous alterations involved crustaceans which are not a monophyletic group but are part of a larger group along with insects Pancrustacea The old ideas surrounding crustacean evolution have served scientists well for many years it is now time to turn toward new research by embracing the results derived from

investigations conducted largely within this century For example new definitions have arisen from sources across several fields of study and Frederick R Schram and Stefan Koenemann have created a book that explores paleobiodiversity and the diversity of modern body plans Developments within ontogenetic studies continue to generate remarkable insights into crustaceomorph evolution in regard to patterns of embryology and a revolution in the application of development genetics Phylogeny techniques of analysis and new sources of data derived from molecular sequencing and genetic studies have forced scientists to consider new hypotheses concerning the interrelationships of all the pancrustaceans both the crustaceomorphs and Hexapoda Yet some fossil groups still remain enigmatic Thylacocephala Despite this research into fossils even if incompletely understood fills in gaps of our knowledge of paleobiodiversity and it is useful for many things including analyzing the origin and early evolution of Hexapoda Evolution and Phylogeny of Pancrustacea demonstrates the use of multiple alternative hypotheses and other techniques through the well executed presentation of diverse data sources involving Pancrustacea Readers are left with clues to great mysteries including the possible pathways of evolution within marine arthropods

Chemical Communication in Crustaceans Thomas Breithaupt, Martin Thiel, 2010-11-25 The crustaceans are ecologically and economically important organisms They constitute one of the dominant invertebrate groups on earth particularly within the aquatic realm Crustaceans include some of the preferred scientific model organism profitable aquaculture specimen but also invasive nuisance species threatening native animal communities throughout the world Chemoreception is the most important sensory modality of crustaceans acquiring important information about their environment and picking up the chemical signals that mediate communication with conspecifics Significant advances have been made in our understanding of crustacean chemical communication during the past decade This includes knowledge about the identity production transfer reception and behavioral function of chemical signals in selected crustacean groups While it is well known that chemical communication is an integral part of the behavioral ecology of most living organisms the intricate ways in which organisms allocate chemicals in communication remains enigmatic How does the environment influence the evolution of chemical communication What are the environmental cues that induce production or release of chemicals How do individuals economize production and utilization of chemicals What is the importance of molecule specificity or mix of a molecule cocktail in chemical communication What is the role of chemical cues in multimodal communication How does the ontogenetic stage the sex or the physiological status of an individual affect its reaction to chemical cues Many of these questions still represent important challenges to biologists

Reproductive Biology Martin Thiel, 2013 Rickey Cothran and Martin Thiel explore the reproductive biology of crustaceans from allocation strategies at the individual level to the ecology of mating systems

Recruitment, Colonization and Physical-Chemical Forcing in Marine Biological Systems Susanne Baden, Leif Pihl, Rutger Rosenberg, Jarl-Ove Strömberg, Ib Svane, Peter Tiselius, 2013-06-29 The 32nd European Marine Biology Symposium was held in Lysekil Sweden on August 16 22 1997

organised by Kristineberg Marine Research Station The selected topics were Recruitment and colonisation and Physical and Chemical Forcing on Marine Biological Systems partly reflecting the present research interests at Kristineberg In this volume recruitment and colonisation processes cover primarily the dynamics of interspecific interactions within assemblages as well as the effects of hydrodynamic variables Both laboratory and field studies are emphasised The contribution of papers within the topic Physical and Chemical Forcing on Marine Biological Systems deals with structuring effects of for example tides temperatures nutrients and hypoxia on the physiology and ecology of marine organisms The book covers many aspects of marine life It is our hope that the selected topics will fascinate readers and be of wide interest to students and researchers in marine biology

Life Histories Martin Thiel, Gary A. Wellborn, 2018-05-22 Crustaceans are increasingly being used as model organisms in all fields of biology including neurobiology developmental biology animal physiology evolutionary ecology biogeography and resource management Crustaceans have a very wide range of phenotypes and inhabit a diverse array of environments ranging from the deep sea to high mountain lakes and even deserts The evolution of their life histories has permitted crustaceans to successfully colonize this variety of habitats Few other taxa exhibit such a variety of life histories and behavior A comprehensive overview of their life histories is essential to the understanding of many aspects of their success in marine and terrestrial environments This volume provides a general overview of crustacean life histories Crustaceans have particular life history adaptations that have permitted them to conquer all environments on earth Crustacean life cycles have evolved to maximize fecundity growth and ageing in a wide range of environmental conditions Individual contributions contrast benefits and costs of different life histories including sexual versus asexual production semelparity versus iteroparity and planktonic larvae versus direct development Important aspects of particular behaviors are presented e g migrations defense and territorial behaviors anti predator behavior symbiosis

Reproductive Biology Rickey Cothran, Martin Thiel, 2020-06-18 This is the sixth volume of a ten volume series on The Natural History of the Crustacea The volume synthesizes in nineteen chapters our current understanding of diverse topics in crustacean reproductive biology In the first part of this book the chapters address allocation strategies to reproduction gamete production brooding behavior and other components of parental care in crustaceans The second part of the volume centers on sexual systems in crustaceans The third section of the volume covers crustacean mating systems and sexual selection Reproductive Biology ends with three chapters covering diverse topics including reproductive rhythms crustacean personality research and record breaking crustaceans with respect to reproductive characters
