

## New Worlds, New Horizons in Astronomy and Astrophysics

In recent decades, significant progress in the fields of astronomy and astrophysics has brought about a revolution in understanding of the origins and nature of our universe. This report, the result of a survey of astronomy and astrophysics for the decade of the 2010's, lays out a plan for sustaining the current progress in research over the coming decade and beyond. The proposed plan focuses on three science objectives: the exploration of the origins of the universe, the search for habitable planets outside our solar system, and the use of astronomical observations to investigate fundamental physics. The sixth in a series of decadal surveys, this study differs from its predecessors by reconsidering past unrealized priorities in addition to suggesting new research activities. The study also includes a detailed analysis of technical readiness and cost risks of projects and activities, resulting in a coherent program that fits within the survey's projected funding profiles for the three sponsoring agencies: the National Aeronautics and Space Administration (NASA), the National Science Foundation (NSF), and the Department of Energy (DOE).

Once limited to studying only visible light, astronomers and astrophysicists now observe the universe using the entire electromagnetic spectrum, from radio waves to gamma rays. Using these and other methods of investigation, the astronomy and astrophysics communities are able to answer profound questions about the origins of the universe and Earth's place within it. A compelling program of research that includes complementary space-based and ground-based facilities and foundational research efforts is needed to maximize scientific progress. *New Worlds, New Horizons* presents just such a program, while outlining the relationship of the federal program to the larger astronomy and astrophysics enterprise, discussing workforce development and other core issues, and describing in detail recommendations for the next decade of research.

*New Horizons in Astronomy* John C. Brandt, Stephen P. Maran, 1972-01-01 How did the universe originate and how did it reach its present state What formed the earth and how did life arise These are among the central questions that have concerned every human culture and they obviously involve events buried in the distant past How can we progress in understanding so as to choose among the various theories for the origin of the universe or possibly formulate a better theory This process of exploration is what we call astronomy and the final purpose of astronomy is thus nothing less than to account for the origin and physical nature of the universe around us *New Horizons in Astronomy [by] John C. **The New Cosmos** Albrecht Unsöld, Bodo

Baschek, 2013-03-09 Astronomy astrophysics and space research have developed extensively and rapidly in the last few decades. The new opportunities for observation afforded by space travel, the development of high sensitivity light detectors and the use of powerful computers have revealed new aspects of the fascinating world of galaxies and quasars, stars and planets. The fourth completely revised edition of *The New Cosmos* bears witness to this explosive development. It provides a comprehensive but concise introduction to all of astronomy and astrophysics. It stresses observations and theoretical principles equally, requiring of the reader only basic mathematical and scientific background knowledge. Like its predecessors, this edition of *The New Cosmos* will be welcomed by students and researchers in the fields of astronomy, physics and earth sciences as well as by serious amateur astronomers.

**New Cosmic Horizons** David Leverington, 2000. *New Cosmic Horizons* tells the extraordinary story of space based astronomy since the Second World War. Starting with the launch of the V2 rocket in 1946, this book explores the triumphs of space experiments and spacecraft designs and the amazing astronomical results that they have produced. It also examines the fascinating way in which the changing political imperatives of the USA, USSR and Western Europe have modified their space astronomy programmes. This history of astronomy from space is extensively illustrated and unique in its coverage of such a broad range of topics in language accessible to amateur and professional astronomers and other technically minded readers. All major astronomy missions of the first fifty years of space research are covered: the Soviet Sputnik and American Explorer projects, the subsequent race to the moon, solar and planetary missions and the wonders of modern astrophysics culminating in the exciting results of the Hubble Space Telescope.
