Reimagining Urban Marxisms Francesco Biagi, 2025-06-24 This volume presents an interdisciplinary and international reevaluation of urban Marxisms Bringing together the main critical Marxist perspectives from around the world on contemporary urban studies it engages with a range of issues connected to the urban question such as urban sprawl housing and increasing rates of urbanization across the globe With attention to the manner in which the three axes of class gender and race play a fundamental role in contemporary social phenomena it interweaves different issues that are inextricably linked in matters of urban inequality The book bridges a significant gap between urban studies and Marxists theories by reviving Marx and Engels ideas in the context of analyzing urban studies in the twenty first century The objective is to bring together diverse perspectives and directions of the ongoing debate on the urban question Although there are multiple Marxisms and theoretical currents inspired by Marxism that seek to understand the urban and spatial transformations of today there has been a lack of comprehensive scholarship that systematically brings them together to frame this debate The goal is to unite the main critical Marxist perspectives on contemporary urban studies *Reimagining Urban Marxisms* will therefore appeal to scholars across disciplines with interests in Marxist analyses of contemporary urban and spatial transformations and the phenomenon of planetary urbanization

Urban Assemblages Ignacio Fariás, Thomas Bender, 2012-08-21. This book takes it as a given that the city is made of multiple, partially localized assemblages built of heterogeneous networks, spaces, and practices. The past century of urban studies has focused on various aspects: space, culture, politics, economy, but these too often address each domain and the city itself as a bounded and cohesive entity. The multiple and overlapping enactments that constitute urban life require a commensurate method of analysis that encompasses the human and non-human aspects of cities, from nature to socio-technical networks to hybrid collectivities, physical artefacts, and historical legacies, and the virtual or imagined city. This book proposes, and its various chapters offer demonstrations importing into urban studies a body of theories, concepts, and perspectives developed in the field of science and technology studies, STS, and more specifically Actor Network Theory (ANT). The essays examine artefacts, technical systems, architectures, place, and eventful spaces; the persistence of history, imaginary, and virtual elements of city life; and the politics and ethical challenges of a mode of analysis that incorporates multiple actors as hybrid chains of causation. The chapters are attentive to the multiple scales of both the object of analysis and the analysis itself. The aim is more ambitious than the mere transfer of a fashionable template. The authors embrace ANT critically, as much as a metaphor as a method of analysis, deploying it to think with, to ask new questions, to find the language to achieve more compelling descriptions of city life and of urban transformations. By greatly extending the chain or network of causation, proliferating heterogeneous agents, non-human as well as human, without limit as to their enrolment in urban assemblages, Actor Network Theory offers a way of addressing the particular complexity and openness characteristic of cities. By enabling an escape from the reification of the city so common

in social theory ANT's notion of hybrid assemblages offers richer framing of the reality of the city of urban experience that is responsive to contingency and complexity Therefore Urban Assemblages is a pertinent book for students practitioners and scholars as it aims to shift the parameters of urban studies and contribute a meaningful argument for the urban arena which will dominate the coming decades in government policies
