Cato, 2006 A black hole is a point of extreme mass in space time with a radius or event horizon inside of which all electromagnetic radiation including light is trapped by gravity A black hole is an extremely compact object collapsed by gravity which has overcome electric and nuclear forces It is believed that stars appreciably larger than the Sun once they have exhausted all their nuclear fuel

collapse to form black holes they are black because no light escapes their intense gravity Material attracted to a black hole though gains enormous energy and can radiate part of it before being swallowed up Some astronomers believe that enormously massive black holes exist in the centre of our galaxy and of other galaxies. This book brings together leading research from throughout the world Molecular Electrochemistry of Inorganic, Bioinorganic and Organometallic Compounds A.J.L. Pombeiro, J.A. McCleverty, 2012-02-02 The use of electrochemical techniques by chemists particularly those who regard themselves as inorganic coordination chemists has undergone a very rapid growth in the last 15 20 years The techniques as dassically applied to inorganic species had their origins in analytical chemistry and the methodology had assumed until the mid 60s more importance than the chemiStry However the growth of interest in coordination compounds including organometallic complexes having unusually rich of electron transfer in bio inorganic redox properties and in the understanding species has propelfed electro chemistry into the foreground of potentially readily available techniques for application to a very wide range of problems of interest to those chemists This growth has been fuelled additionally by the availability of relatively cheap equipment of growing sophistication and by an increase in the inorganic chemists general knowledge of physical electrochemistry In particular with increasing availability and sophistication of egUipment kinetic problems are now being addressed and the range of electrode types and configuration and solvents has been greatly expanded Furthermore the rapid expansion of interest in biological problems has opened new avenues in functionalisation of electrodes in the development of sensory devices and in a sense a return to the analytical base of the science using novel and multi disciplinary techniques drawing on synthesis chemistry of and electronic micro engeneering The drive towards increasing use microcomputer controlled data analysis and the development of microeledrodes has opened exciting new avenues for the exploration of chemical reactions involving electron transfer processes Opportunities in Chemistry Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Janice A.
