European Perspectives on Environmental Law and Governance Suzanne Kingston, 2013-01-25 This book provides a range of perspectives on some of the most pressing contemporary challenges in EU environmental law and governance from some of today's leading European environmental academics and practitioners The book maintains a focus on three key cross cutting issues each of which is carefully analysed through the lens of governance The first theme to be addressed is that of climate change and the problems it poses for EU governance The second issue explored concerns the challenge of integrating environmental considerations into other policy areas as is required by the Treaty on the Functioning of the European Union

and the EU's Charter of Fundamental Rights. Finally, the third theme centres on the important challenge of improving environmental enforcement within the EU and considers issues such as the Aarhus Convention and the evolution of the Commission's work on implementation and enforcement throughout the past twenty years. Each of these three themes is situated within the broader ongoing debate about the changing nature of European environmental governance post-Lisbon and the ways in which developments in this area fit within broader trends in European governance theory and policy. Generally, European Perspectives on Environmental Law and Governance contains contributions from experts in the field, including Mary Robinson, Alan Boyle, Ludwig Kramer, and Liam Cashman, and will be of interest to academics, students, and practitioners of EU environmental law.

Understanding Environmental Policy Convergence Helge Jörgens, Andrea Lenschow, Duncan Liefferink, 2014-01-09. Over recent decades, national environmental policies have become increasingly alike. This book analyses the driving forces of this process of policy convergence, providing an in-depth empirical analysis of the international forces at work. It does so by investigating how four countries—France, Hungary, Mexico, and the Netherlands—have shaped their domestic environmental policies in the context of international institutions and relationships while taking into account various domestic factors and national conditions. Employing a qualitative approach, the authors seek to deepen understanding of the processes and mechanisms through which international forces such as legal harmonisation, institutionalised information flows, and global trade dynamics affect domestic environmental policy change. Together with its companion volume, *Environmental Policy Convergence in Europe: The Impact of Trade and International Institutions* (2008), this book provides a showcase of mixed methodologies combining quantitative and qualitative approaches in an innovative way.

Institutional Dynamics in Environmental Governance Bas Arts, Pieter Leroy, 2006-09-09. Environmental policy in its broadest context has been significantly revitalized and renewed during the last two decades. That observation is nothing new, attested to by the number of publications, conferences, and both private and public projects that have been initiated. However, our understanding of the dynamics of this renewal has generally been informed by studies on single policies and projects, leaving us with a limited understanding of what the newness consists of in terms of an integrated perspective. This book presents fresh analyses of a number of well-known cases but does so from one comprehensive view: the so-called policy arrangement approach. Cases discussed range over organic farming, integrated water management, nature policy, cultural heritage policy, integrated region-oriented policy, corporate environmental management, and target group policy, always in search of the commonality of experience and conclusions to be drawn in understanding the past and in formulating future perspectives.
