Problems of Multiphase Fluid Filtration Anatoli? Nikolaevich Konovalov,1994 This book deals with a spectrum of problems related to the mathematical modeling of multiphase filtration Emphasis is placed on an inseparable triad model algorithm computer code An analysis of new and traditional filtration problems from the point of view of both their numerical implementation and the reproduction of one or another technological characteristics of the processes under consideration is given The basic principles which underlie the construction of efficient numerical methods taking into account the filtration problems are discussed non evolutionary nature degeneration strongly varying coefficients the temporal duration of the processes involved etc Also attention is paid to the splitting method in terms of the physical processes involved the method of fictitious domains and the method of front separation in grid solution A modular analysis is performed with computational algorithms making it possible to set up simultaneously the structure of the algorithms themselves and the structure of programs to implement these algorithms on a computer In conclusion the author discusses issues concerning the possibility of constructing a model of an oil deposit on a computer **Hydromechanics** Emmanuil G. Irreversibility in the Many-Body Problem L. M. Garrido, 2013-06-29 The Sitges International School of Physics is the second one to be held in Spain on the Many Body Problem The first one took place on Mallorca during the summer 1969 The aim of the school was mainly to direct the interest of professors and students of Spanish Universities towards this concrete field of research For this purpose 55 specially prepared lectures were given by an eminent collection of lecturers Besides a school of this class contributes to the scientific formation of many students from other countries Also in a meeting of this kind personal contacts are born that favour future collaboration between scientists In view of the success of the first two schools we intend to foster future international meetings on this subject until interest in it is consolidated in Spain All the lectures given are published here except those of Professor P C Martin whose lectures have previously been published I would like to thank all those people who helped to make this school a success and in particular Prof J L Villar Palasi Minister of Education of Spain for sponsoring the school Dr R Diez Hochleitner Undersecretary of the Ministry of Education for receiving the project of this school with such enthusiasm

PREFACE Prof E Costa Novella Director General of Universities in Spain and Dr F Arias Salgado who showed such interest and patience while assuring the necessary finance would be found for the school

Problems of hydrodynamics and continuum mechanics: contributions in honor of the 60th birthday of Academician L.I. Sedov, 14th November, 1967 Society for Industrial and Applied Mathematics, **Nonlinear Theory of Shallow Shells**

Iosif I. Vorovich, 2008-01-08 This book presents rigorous treatment of boundary value problems in nonlinear theory of shallow shells The consideration of the problems is carried out using methods of nonlinear functional analysis **Physicochemical Hydrodynamics** Ronald F. Probstein, 2013-10-22 Physicochemical Hydrodynamics An Introduction aims to provide an introduction to physicochemical hydrodynamics PCH which deals with the interaction between fluid flow and physical chemical and biochemical processes PCH has applications in many areas of science and technology and is a rapidly expanding field Emphasis of this book is on rational theory and its consequences with the purpose of showing the underlying unity of PCH in which diverse phenomena can be described in physically and mathematically similar ways The magic of this unity is shown in the similar manner in which solutes concentrate in a flow containing chemically reacting surfaces reverse osmosis membranes and electrodialysis membranes or the similarity of particle motions in sedimentation centrifugation ultrafiltration and electrophoresis Problems are included at the end of each chapter and are ordered following the sequence in which the material is set out The questions range in difficulty with most requiring an analytic development but with some asking only for a descriptive answer All problems are intended to illustrate the ideas presented though often the solution goes beyond the explicit discussion in the book with the answer constituting a generalization or extension of the text material This book is an essential source of information for students majoring in the field of PCH
