The Evolution of Psychiatric Education

Time has no divisions to mark its passage. There is never a thunderstorm or blare of trumpets to announce the beginning of a new month or year.

—Thomas Mann

NOR HAS the panorama of psychiatric education, as it has developed, demonstrated sudden beginnings or endings. Like a great river, it began in the small streams and trickles of the slower-moving 19th century, building with the great wars and the technical, social, and cultural revolutions of this century into a massive river of diverse educational activities. Immersion in this vast stream of effort for the last 50 years has been, for this author, a fascinating journey—totally engrossing, often exhausting, frequently bewildering, but never boring.

Two factors seem to best characterize the broad movement of psychiatric education during this last half century: the exponential growth of information relevant to the psychiatrist's practice and thus his training, and what Roy Grinker recently referred to as the "struggle for eclecticism." As far as the information explosion is concerned, not only is there infinitely more information for the psychiatrist to become conversant with than 50 years ago, but this information is more relevant and applicable to patient care and "disease" prevention. To keep these bits and pieces in proper perspective and to effectively "program" them into educational endeavors presents a major struggle for educators—a constant battle to espouse what is scientifically sound, individually and socially relevant, and psychologically therapeutic.

The struggle for eclecticism requires that this be done without overemphasis of one area or blatant disregard of others. Not all efforts have succeeded, and many medical schools and residency programs have been labeled "organic," "biological," "descriptive," "social," "psychoanalytic," etc. So strong have been the feelings of various schools that the term "eclectic" itself has been frequently used for name-calling. I am pleased to observe that the struggle for eclecticism seems on the way to being won. Even such a discarded term as "neuropsychiatry" may enjoy a happy reincarnation—this time on a solid scientific base.

On the other hand, the battle with the information explosion and

Psychiatric Education Prologue To The 1980s:

Psychiatric Education Anne H. Rosenfeld, 1976 *American Psychiatry After World War II (1944-1994)* Roy W. Menninger, John C. Nemiah, 2008-11-01 The history of psychiatry is complex reflecting diverse origins in mythology cult beliefs astrology early medicine law religion philosophy and politics This complexity has generated considerable debate and an increasing outflow of historical scholarship ranging from the enthusiastic meliorism of pre World War II histories to the iconoclastic revisionism of the 1960s to more focused studies such as the history of asylums and the validity and efficacy of Freudian theory This volume intended as a successor to the centennial history of American psychiatry published by the American Psychiatric Association in 1944 summarizes the significant events and processes of the half century following World War II Most of this history is written by clinicians who were central figures in it In broad terms the history of psychiatry after the war can be viewed as the story of a cycling sequence shifting from a predominantly biological to a psychodynamic perspective and back again all presumably en route to an ultimate view that is truly integrated and interacting all the while with public perceptions expectations exasperations and disappointments In six sections Drs Roy Menninger and John Nemiah and their colleagues cover both the continuities and the dramatic changes of this period The first four sections of the book are roughly chronological The first section focuses on the war and its impact on psychiatry the second reviews postwar growth of the field psychoanalysis and psychotherapy psychiatric education and psychosomatic medicine the third recounts the rise of scientific empiricism biological psychiatry and nosology and the fourth discusses public attitudes and perceptions of public mental health policy deinstitutionalization antipsychiatry the consumer movement and managed care The fifth section examines the development of specialization and differentiation exemplified by child and adolescent psychiatry geriatric psychiatry addiction psychiatry and forensic psychiatry The concluding section examines ethics and women and minorities in psychiatry Anyone interested in psychiatry will find this book a fascinating read
