**Signal and Image Processing in Navigational Systems** Vyacheslav Tuzlukov, 2018-10-03 Classical and modern theories have given us a degree of noise immunity by defining the sufficient statistic of the mean of the likelihood function The generalized theory moves beyond these limitations to determine the jointly sufficient statistics of the mean and variance of the likelihood function Signal and Image Processing in Navigational Systems introduces us to the generalized approach and then delves rigorously into the theory and practical applications of this approach This volume represents the most in depth discussion of the generalized approach to date providing many examples and computer models to demonstrate how this approach raises the upper limits of noise immunity for navigation systems leading to better detection performances This book is vital for signal and image processing experts radar communications acoustics and navigational systems designers as well as professionals in the fields of statistical pattern recognition biomedicine astronomy and robotics who wish to extend the boundaries of noise immunity and improve qualitative performance of their systems
