Radially Symmetric Patterns Of Reaction Diffusion Systems:

Radially Symmetric Patterns of Reaction-Diffusion Systems Arnd Scheel, 2003 Includes a paper that studies bifurcations of stationary and time periodic solutions to reaction diffusion systems This title develops a center manifold and normal form theory for radial dynamics which allows for a complete description of radially symmetric patterns

Equivariant, Almost-Arborescent Representations of Open Simply-Connected 3-Manifolds; A Finiteness Result Valentin Poenaru, C. Tanasi, 2004 Shows that at the cost of replacing V DEGREES3 by V_h DEGREES3 V DEGREES3 with very many holes we can always find representations X DEGREES2 $\text{stackrel{rel f}{\rightarrow}} V$ DEGREES3 with X DEGREES2 locally finite and almost arborescent with $\Psi f \Phi f$ and with the open Representation Type of Commutative Noetherian Rings III: Global Wildness and Tameness Lee Klingler, Lawrence S. Levy, 2005 This memoir completes the series of papers beginning with KL1 KL2 showing that for a commutative noetherian ring Λ either the category of Λ modules of finite length has wild representation type or else we can describe the category of finitely generated Λ modules including their direct sum relations and local global relations There is a possible exception to our results involving characteristic 2

Quasi-Ordinary Power Series and Their Zeta Functions Enrique Artal-Bartolo, 2005-10-05 The main objective of this paper is to prove the monodromy conjecture for the local Igusa zeta function of a quasi ordinary polynomial of arbitrary dimension defined over a number field In order to do it we compute the local Denef Loeser motivic zeta function $Z_{\text{DL}}(h, T)$ of a quasi ordinary power series h of arbitrary dimension over an algebraically closed field of characteristic zero from its characteristic exponents without using embedded resolution of singularities This allows us to effectively represent $Z_{\text{DL}}(h, T) = \sum_{i \geq 0} p_i(T) T^i$ such that almost all the candidate poles given by $Q(T)$ are poles Anyway these candidate poles give eigenvalues of the monodromy action on the complex R_{ψ_h} of nearby cycles on $h^{-1}(0)$ In particular we prove in this case the monodromy conjecture made by Denef Loeser for the local motivic zeta function and the local topological zeta function As a consequence if h is a quasi ordinary polynomial defined over a number field we prove the Igusa monodromy conjecture for its local Igusa zeta function

A Random Tiling Model for Two Dimensional Electrostatics Mihai Ciucu, 2005 Studies the correlation of holes in random lozenge $i.e.$ unit rhombus tilings of the triangular lattice This book analyzes the joint correlation of these triangular holes when their complement is tiled uniformly at random by lozenges

Classification and Probabilistic Representation of the Positive Solutions of a Semilinear Elliptic Equation Benoît Mselati, 2004 Concerned with the nonnegative solutions of $\Delta u = u^2$ in a bounded and smooth domain in $\mathbb{R}^d$ this title intends to prove that they are uniquely determined by their fine trace on the boundary as defined in DK98a answering a major open question of Dy02

Center Manifolds for Semilinear Equations with Non-Dense Domain and Applications to Hopf Bifurcation in Age Structured Models Pierre Magal, Shigui Ruan, 2009 Several types of differential equations such as delay differential equations age structure models in population dynamics evolution equations with boundary conditions can be written as semilinear

Cauchy problems with an operator which is not densely defined in its domain The goal of this paper is to develop a center manifold theory for semilinear Cauchy problems with non dense domain Using Liapunov Perron method and following the techniques of Vanderbauwhede et al in treating infinite dimensional systems the authors study the existence and smoothness of center manifolds for semilinear Cauchy problems with non dense domain As an application they use the center manifold theorem to establish a Hopf bifurcation theorem for age structured models

Rigidity Theorems for Actions of Product Groups and Countable Borel Equivalence Relations Greg Hjorth, A. S. Kechris, 2005 Contributes to the theory of Borel equivalence relations considered up to Borel reducibility and measures preserving group actions considered up to orbit equivalence This title catalogs the actions of products of the free group and obtains additional rigidity theorems and relative ergodicity results in this context

The Second Duals of Beurling Algebras Harold G. Dales, Anthony To-Ming Lau, 2005 Let A be a Banach algebra with second dual space A We propose to study the space A as a Banach algebra There are two Banach algebra products on A denoted by $\Box$ and $\Diamond$ The Banach algebra A is Arens regular if the two products $\Box$ and $\Diamond$ coincide on A
