Carroll, 2012 *Radiologic Science for Technologists* Stewart C. Bushong, 1980 *Biological Aspects of Radiation Protection* T. Sugahara, O. Hug, 1971 In the maintenance and development of sound standards of radiation protection many types of enquiry are important These range from the purely technical examination of the ways in which exposure may occur or radionuclides may enter the body under existing or new conditions of occupational activity to the most fundamental studies of the interaction of high energy particulate radiation with matter or the metabolic localisation and kinetics of unfamiliar radionuclides One of the most important and most basic problems however is to establish a quantitative estimate for the frequency with which various types of injury would be induced in man following exposure to low doses of radiation delivered at low dose rates No sound limits can be proposed for appropriately safe levels of occupational or population exposure unless the associated hazard or its maximum likely value can be at least approximately assessed It is one of the most important tasks of those concerned with radiation protection that these criteria should be kept under constant review in the light of developing knowledge and that the fields in which further information is needed should be defined and described Understanding Radiation Biology Kenneth Chadwick, 2019-11-15 This book provides a qualitative and quantitative exploration of the action of radiation on living matter which leads to a complete and coherent interpretation of radiation biology It takes readers from radiation induced molecular damage in the nucleus of the cell and links this damage to cellular effects such as cell killing chromosome aberrations and mutations before exploring organ damage organism lethality and cancer induction It also deals with radiological protection concepts and the difficulties of predicting the dose effect relationship for low dose and dose rate radiation risk The book ends with separate chapters dealing with the effects of UV light exposure and risk classification of chemical mutagens both of which are derived by logical extensions of the radiation model This book will provide the basic foundations of radiation biology for undergraduate and graduate students in
