NUREG/CR. U.S. Nuclear Regulatory Commission,1980 **Radiation Carcinogenesis** Arthur C. Upton,1986 This book provides the first comprehensive and systematic survey of present knowledge about radiation carcinogenesis World experts review in detail current information on such topics as the incidence of various forms of cancer in irradiated populations the carcinogenic effects of ionizing radiation in laboratory animals theoretical mechanisms of radiation carcinogenesis and the implications of the data for assessing the risks of human cancer In view of recent controversy about the carcinogenic hazards of low level exposure to radiation and other carcinogens this book is a timely contribution toward our understanding of the carcinogenic risks of low level radiation The Disposition Dilemma National Research Council,Division on Engineering and

Physical Sciences, Board on Energy and Environmental Systems, Committee on Alternatives for Controlling the Release of Solid Materials from Nuclear Regulatory Commission-Licensed Facilities, 2002-06-13 The U S Nuclear Regulatory Commission USNRC and its predecessor the U S Atomic Energy Commission AEC have attempted since the 1970s to give greater uniformity to the policy and regulatory framework that addresses the disposition of slightly radioactive solid material. The issue remains unresolved and controversial. The USNRC has tried to issue policy statements and standards for the release of slightly radioactive solid material from regulatory control while such material has been released and continues to be released under existing practices. In 1980 the USNRC proposed regulatory changes to deregulate contaminated metal alloys but withdrew them in 1986 and began work with the Environmental Protection Agency EPA to develop more broadly applicable federal guidance. In 1990 the USNRC issued a more sweeping policy as directed by the Low Level Radioactive Waste Policy Amendments Act of 1985 LLWPAA declaring materials with low concentrations of radioactivity contamination below regulatory concern BRC and hence deregulated. Congress intervened to set aside the BRC policy in the Energy Policy Act of 1992 after the USNRC's own suspension of the policy. Subsequent attempts by USNRC staff to build consensus among stakeholder groups as a basis for future policy articulations were met by boycotts of stakeholder meetings both in the immediate aftermath of the BRC policy and again in 1999 during public hearings on a new examination of the disposition of such materials. The only USNRC standard addressing the disposition of slightly radioactive solid material is a guidance document published in June 1974 by the AEC whose regulatory authority over civilian nuclear facilities the USNRC assumed upon its creation a few months later in January 1975. In August 2000 with another examination of this issue under way the USNRC requested that the National Research Council form a committee to provide advice in a written report. The National Research Council established the Committee on Alternatives for Controlling the Release of Solid Materials from Nuclear Regulatory Commission Licensed Facilities to address this task. The committee's task involved evaluating and providing recommendations on the history of the technical bases and policies and precedents for managing slightly radioactive solid material from USNRC licensed facilities, the sufficiency of technical bases needed to establish standards for release of solid materials from regulatory control, clearance standards and the adequacy of measurement technologies, the concerns of stakeholders and how the USNRC should incorporate them and the efforts of international organizations on clearance standards. The committee was also asked to examine the current system for release of slightly radioactive solid material from regulatory control to recommend whether the USNRC should continue to use this system and to recommend changes if appropriate. The committee's fact finding process included two site visits to waste brokering facilities and nearly 40 invited presentations from the USNRC, the U S Department of Energy DOE and EPA staff, stakeholder organizations, nuclear industry organizations and other interested parties. In conducting its study the committee first examined the current system of standards, guidance and practices used by the USNRC and agreement states to determine whether to release slightly

radioactive solid material from further regulatory control under the Atomic Energy Act The committee found that the current workable system allows licensees to release material according to pre established criteria but contains inconsistencies such that nuclear reactor licensees can release materials only if there is no detectable radioactivity above background levels whereas materials licensees can do so if small detectable levels are found The committee evaluated technical analyses of the estimated doses of the final disposition of slightly radioactive solid materials These analyses were conducted by federal agencies and international organizations including the International Atomic Energy Agency IAEA the European Commission and other groups The Disposition Dilemma Controlling the Release of Solid Materials from Nuclear Regulatory Commission Licensed Facilities explains the committee s findings and recommendations
