Donald Cossairt, Matthew Quinn, 2019-05-06 Choice Recommended Title January 2020 Providing a vital resource in tune with the massive advancements in accelerator technologies that have taken place over the past 50 years Accelerator Radiation Physics for Personnel and Environmental Protection is a comprehensive reference for accelerator designers operators managers health and safety staff and governmental regulators Up to date with the latest developments in the field it allows readers to effectively work together to ensure radiation safety for workers to protect the environment and adhere to all applicable standards and regulations This book will also be of interest to graduate and advanced undergraduate students in physics and engineering who are studying accelerator physics Features Explores accelerator radiation physics and the latest results and research in a comprehensive single volume fulfilling a need in the market for an up to date book on this topic Contains problems designed to enhance learning Addresses undergraduates with a background in math and or science Safety for Particle Accelerators Thomas Otto, 2020-12-29 The use of non standard technologies such as superconductivity cryogenics and radiofrequency pose challenges for the safe operation of accelerator facilities that cannot be addressed using only best practice from occupational safety in conventional industry This book introduces readers to different occupational safety issues at accelerator facilities and is directed to managers scientists technical personnel and students working at current or future accelerator facilities While the focus is on occupational safety how to protect the people working at these facilities the book also touches on machine safety how to prevent accelerators from doing structural damage to themselves This open access book offers a first introduction to safety at accelerator facilities Presenting an overview of the safety related aspects of the specific technologies employed in particle accelerators it highlights the potential hazards at such facilities and current prevention and protection measures It closes with a review of safety management and organization at accelerator facilities Radiation Protection Design Guidelines for 0.1-100 MeV Particle Accelerator Facilities National Council on Radiation Protection and

Measurements NCRP.,1977 Radiation Safety of Accelerator Based Radioisotope Production Facilities IAEA,2020-08-18

Radioisotopes are used worldwide in a range of medical industrial research and academic applications A large proportion of these radioisotopes are produced in particle accelerators and the number of institutions that operate linear accelerators or cyclotrons and manufacture and distribute radiopharmaceuticals for example is significant and increasing The production of radioisotopes using particle accelerators poses significant radiation hazards to workers members of the public and the environment when accelerators are operated without adequate radiation safety measures This Safety Guide provides practical guidance for implementing radiation protection and safety measures in such facilities involved in the production and use of radioisotopes **Radiation Protection Design Guidelines for 0.1-100 MeV Particle Accelerator Facilities**

National Council on Radiation Protection and Measurements,1977 This report of the National Council on Radiation Protection and Measurements NCRP is concerned with radiations produced by accelerators of charged particles having energies from 9 1 to 100 MeV The material in this report includes recommendations concerning structural shielding and details of accelerator facility design as they pertain to radiation protection The scientific committee responsible for the preparation of this report was charged with preparing a guide to good practice in radiation protection for all types of particle accelerators taking into full consideration their broad application in research medicine and industry In carrying out this objective the committee has endeavored to organize into a single report the recommendations and guidelines for the many accelerator designs performance ratings and applications without resorting to over generalization or undue conservatism There is some overlap of this report with the coverage of other NCRP reports but an attempt has been made to limit duplication of material except where it is justified for the sake of continuity or because of the need to complement the coverage of the following existing NCRP reports or to update their information and recommendations NCRP Report Nos 14 1954a 31 1964b 34 1970a which was superseded by NCRP Report No 49 1976 38 1971a From the Preface page iii
