Naturally occurring radionuclides are found throughout the earth's crust and they form part of the natural background of radiation to which all humans are exposed. Many human activities such as mining and milling of ores, extraction of petroleum products, use of groundwater for domestic purposes and living in houses alter the natural background of radiation either by moving naturally occurring radionuclides from inaccessible locations to locations where humans are present or by concentrating the radionuclides in the exposure environment. Such alterations of the natural environment can increase sometimes substantially radiation exposures of the public. Exposures of the public to naturally occurring radioactive materials NORM that result from human activities that alter the natural environment can be subjected to regulatory control at least to some degree. The regulation of public exposures to such technologically enhanced naturally occurring radioactive materials TENORM by the US Environmental Protection Agency (EPA) and other regulatory and advisory organizations is the subject of this study by the National Research Council's Committee on the Evaluation of EPA Guidelines for Exposures to Naturally Occurring Radioactive Materials.

Environmental Protection Agency. Office of Radiation Programs,1977 The First City on Mars: An Urban Planner's Guide to Settling the Red Planet Justin B. Hollander,2023-02-01

Hundreds of novels, films and TV shows have speculated about what it would be like for us Earthlings to build cities on Mars. To make it a reality, however, these dreamers are in sore need of additional conceptual tools in their belt, particularly a rich knowledge of city planning and design. Enter award-winning author and Tufts University professor Justin Hollander. In this book, he draws on his experience as an urban planner and researcher of human settlements to provide a thoughtful exploration of what a city on Mars might actually look like. Exploring the residential, commercial, industrial and infrastructure elements of such an outpost, the book is able to paint a vivid picture of how a Martian community would function: the layout of its public spaces, the arrangement of its buildings, its transportation network and many more crucial aspects of daily life on another planet. Dr. Hollander then brings all these lessons to life through his own

rendered plan for Aleph one of many possible designs for the first city on Mars Featuring a plethora of detailed cutting edge illustrations and blueprints for Martian settlements this book at once inspires and grounds the adventurous spirit It is a novel addition to the current planning underway to colonize the Red Planet providing a rich review of how we have historically overcome challenging environments and what the broader lessons of urban planning can offer to the extraordinary challenge of building a permanent settlement on Mars Annual Report, EPA Review of Radiation Protection Activities ,1975
