*Layered Learning in Multiagent Systems* Peter Stone,2000-03-03 This book looks at multiagent systems that consist of teams of autonomous agents acting in real time noisy collaborative and adversarial environments This book looks at multiagent systems that consist of teams of autonomous agents acting in real time noisy collaborative and adversarial environments The book makes four main contributions to the fields of machine learning and multiagent systems First it describes an architecture within which a flexible team structure allows member agents to decompose a task into flexible roles and to switch roles while acting Second it presents layered learning a general purpose machine learning method for complex domains in which learning a mapping directly from agents sensors to their actuators is intractable with existing machine learning methods Third the book introduces a new multiagent reinforcement learning algorithm team partitioned opaque transition reinforcement learning TPOT RL designed for domains in which agents cannot necessarily observe the state changes caused by other agents actions The final contribution is a fully functioning multiagent system that incorporates learning in a real time noisy domain with teammates and adversaries a computer simulated robotic soccer team Peter Stone s work is the basis for the CMUnited Robotic Soccer Team which has dominated recent RoboCup competitions RoboCup not only helps roboticists to prove their theories in a realistic situation but has drawn considerable public and professional attention to the field of intelligent robotics The CMUnited team won the 1999 Stockholm simulator competition outscoring its opponents by the rather impressive cumulative score of 110 0

Intelligent Agents V: Agents Theories, Architectures, and Languages Jörg Müller,Munindar P. Singh,Anand S. Rao,2007-04-29

The leading edge of computer science research is notoriously ckle New trends come and go with alarming and unfailing regularity In such a rapidly changing eld the fact that research interest in a subject lasts more than a year is worthy of note The fact that after ve years interest not only remains but actually continues to grow is highly unusual As 1998 marked the fth birthday of the International Workshop on Agent Theories Architectures and Languages ATAL it seemed appropriate for the organizers of the original workshop to comment

on this remarkable growth and reflect on how the field has developed and matured The first ATAL workshop was co-located with the Eleventh European Conference on Artificial Intelligence ECAI 94 which was held in Amsterdam The fact that we chose an AI conference to co-locate with is telling at that time we expected most researchers with an interest in agents to come from the AI community The workshop which was planned over the summer of 1993 attracted 32 submissions and was attended by 55 people ATAL was the largest workshop at ECAI 94 and the clear enthusiasm on behalf of the community made the decision to hold another ATAL workshop simple The ATAL 94 proceedings were formally published in January 1995 under the title Intelligent Agents and included an extensive review article a glossary a list of key agent systems and unusually for the proceedings of an academic workshop a full subject index The high scientific and production values embodied by the ATAL 94 proceedings appear to have been recognized by the community and resulted in ATAL proceedings being the most successful sequence of books published in Springer Verlag's Lecture Notes in Artificial Intelligence series

**Handbook of Collective Robotics** Serge Kernbach, 2013-05-29 This book is devoted to mechatronic chemical bacteriological biological and hybrid systems utilizing cooperative networked swarm self-organizing evolutionary and bio-inspired design principles and targeting underwater ground air and space applications It addresses issues such as open-ended evolution self-replication self-development reliability scalability energy foraging adaptivity and artificial sociality The book has been prepared by 52 authors from world leading research groups in 14 countries This book covers not only current but also future key technologies and is aimed at anyone who is interested in learning more about collective robotics and how it might affect our society

**Intelligent Autonomous Robotics** Peter Stone, 2022-05-31 Robotics technology has recently advanced to the point of being widely accessible for relatively low budget research as well as for graduate undergraduate and even secondary and primary school education This lecture provides an example of how to productively use a cutting edge advanced robotics platform for education and research by providing a detailed case study with the Sony AIBO robot a vision based legged robot The case study used for this lecture is the UT Austin Villa RoboCup Four Legged Team This lecture describes both the development process and the technical details of its end result The main contributions of this lecture are i a roadmap for new classes and research groups interested in intelligent autonomous robotics who are starting from scratch with a new robot and ii documentation of the algorithms behind our own approach on the AIBOs with the goal of making them accessible for use on other vision based and/or legged robot platforms

**Experimental Robotics VII** Daniela Rus, Sanjiv Singh, 2007-09-04 Experimental robotics is at the core of validating robotics research for both its system science and theoretical foundations Robotics experiments serve as a unifying theme for robotics system science and theoretical foundations This book collects papers on the state of the art in experimental robotics The papers were presented at the 2000 International Symposium on Experimental Robotics

**Balancing Reactivity and Social Deliberation in Multi-Agent Systems** Markus Hannebauer, Jan Wendler, Enrico Pagello, 2003-05-15 This book

presents a subselection of papers presented at the ECAI 2000 Workshop on Balancing Reactivity and Social Deliberation in Multi Agent Systems together with additional papers from well known researchers in the field The 13 revised full papers were carefully reviewed and selected for inclusion in the present book Besides two introductory survey papers the book offers topical sections on architectures and frameworks enhanced reactivity and controlled social deliberation
