Make, Think, Imagine John Browne, 2019-08-28 Today's unprecedented pace of change leaves many people wondering what new technologies are doing to our lives Has social media robbed us of our privacy and fed us with false information Are the decisions about our health security and finances made by computer programs inexplicable and biased Will these algorithms become so complex that we can no longer control them Are robots going to take our jobs Can we provide housing for our ever growing urban populations And has our demand for energy driven the Earth's climate to the edge of catastrophe John Browne argues that we need not and must not put the brakes on technological advance Civilization is founded on engineering innovation all progress stems from the human urge to make things and to shape the world around us resulting in greater freedom health and wealth for all Drawing on history his own experiences and conversations with many of today's great innovators he uncovers the basis for all progress and its consequences both good and bad He argues compellingly that the same spark that triggers each innovation can be used to counter its negative consequences Make Think Imagine provides an

eloquent blueprint for how we can keep moving towards a brighter future The Playful Machine Ralf Der,Georg Martius,2012-01-11 Autonomous robots may become our closest companions in the near future While the technology for physically building such machines is already available today a problem lies in the generation of the behavior for such complex machines Nature proposes a solution young children and higher animals learn to master their complex brain body systems by playing Can this be an option for robots How can a machine be playful The book provides answers by developing a general principle homeokinesis the dynamical symbiosis between brain body and environment that is shown to drive robots to self determined individual development in a playful and obviously embodiment related way a dog like robot starts playing with a barrier eventually jumping or climbing over it a snakebot develops coiling and jumping modes humanoids develop climbing behaviors when fallen into a pit or engage in wrestling like scenarios when encountering an opponent The book also develops guided self organization a new method that helps to make the playful machines fit for fulfilling tasks in the real world The book provides two levels of presentation Students and scientific researchers interested in the field of robotics self organization and dynamical systems theory may be satisfied by the in depth mathematical analysis of the principle the bootstrapping scenarios and the emerging behaviors But the book additionally comes with a robotics simulator inviting also the non scientific reader to simply enjoy the fabulous world of playful machines by performing the numerous experiments
