Robots A Z:

Robots A Z Thomas H. Metos, 1980 Discusses robots automatons and other mechanical devices the earliest of which was developed as part of an Egyptian water clock around 2000 B C Reasoning Robots Michael Thielscher, 2005-07-05 The creation of intelligent robots is surely one of the most exciting and challenging goals of Artificial Intelligence A robot is first of all nothing but an inanimate machine with motors and sensors In order to bring life to it the machine needs to be programmed so as to make active use of its hardware components This turns a machine into an autonomous robot Since about the mid nineties of the past century robot programming has made impressive progress State of the art robots are able to orient themselves and move around freely in indoor environments or negotiate difficult outdoor terrains they can use stereo vision to recognize objects and they are capable of simple object manipulation with the help of artificial extremities At a time where robots perform these tasks more and more reliably we are ready to pursue the next big step which is to turn autonomous machines into reasoning robots A reasoning robot exhibits higher cognitive capabilities like following complex and long term strategies making rational decisions on a high level drawing logical conclusions from sensor information acquired over time devising suitable plans and reacting sensibly in unexpected situations All of these capabilities are characteristics of human like intelligence and ultimately distinguish truly intelligent robots from mere autonomous machines Advances in Reconfigurable Mechanisms and Robots II Xilun Ding, Xianwen Kong, Jian S. Dai, 2015-11-23 This book presents the most recent advances in the research and applications of reconfigurable mechanisms and robots It collects 93 independently reviewed papers presented at the Third ASME IFTOMM International Conference on Reconfigurable Mechanisms and Robots ReMAR 2015 held in Beijing China 20-22 July 2015 The conference papers are organized into seven parts to cover the reconfiguration theory topology kinematics and design of reconfigurable mechanisms including reconfigurable parallel mechanisms The most recent results on reconfigurable robots are presented including their analysis design simulation and control Bio inspired mechanisms are also explored in the challenging fields of rehabilitation and minimally invasive surgery This book further addresses deployable mechanisms and origami inspired mechanisms and showcases a wide range of successful applications of reconfigurable mechanisms and robots Advances in Reconfigurable Mechanisms and Robots II should be of interest for researchers engineers and postgraduate students in mechanical engineering electrical engineering computer science and mathematics **Advances in Factories of the Future, CIM and Robotics** M. Cotsaftis, F. Vernadat, 2013-10-22 Productivity enhancement is a major concern for all manufacturing enterprises Productivity enhancement can be achieved in many ways and many facets of its problems have been investigated over the last decades A number of methods tools and technologies have emerged to efficiently increase productivity and rationalize management of manufacturing enterprises International experts from both academia and industry share their experiences in this collection of articles contributing to the latest advances in the many facets of productivity enhancement in manufacturing enterprises

Themes and visions are detailed on factories of the future new management approaches manufacturing system integration and manufacturing information systems These technical areas can be grouped into four major sections Factories of the future Techniques and tools for automated manufacturing Robotics and Industrial applications The papers illustrate a pattern of valuable and interesting approaches to the fascinating problem of designing a new generation of robots with high enough performance capabilities to be used in an industrial context

Holonic and Multi-Agent Systems for Manufacturing Vladimir Marik, Thomas Strasser, Alois Zotl, 2009-08-25 The research of holonic and agent based systems is developing very rapidly The community around this R D topic is also growing fast despite the fact that the real life practical implementations of such systems are still surprisingly rare However the managers in different branches of industry feel that the holonic and agent based systems represent the only way of managing and controlling very complex highly distributed systems exploring vast volumes of accumulated knowledge The relevant research and development activities gain more and more visible support from both industry as well as public sectors Quite naturally the number of scientific events aimed at the subject field is also growing rapidly We see new lines of conferences like INDIN we observe a strong focus of the already well established conferences e g INCOM or ETFA being shifted toward holonic and agent based manufacturing systems We see an increased interest of the IEEE System Man and Cybernetics Society especially its Technical Committee on Distributed Intelligent Systems which leverages the experience gathered by the members of the former Holonic Manufacturing Systems HMS consortium We see a clear orientation of the IEEE SMC Transactions part C toward applications of agent oriented solutions The same is true of the International Journal on Autonomous Agents and Multi Agent Systems JAAMAS This is a really good sign of the increasing importance of the field

A Textbook of Robotics 2 M. Shoham, 2012-12-06

Flocking and Rendezvous in Distributed Robotics Bruce A. Francis, Manfredi Maggiore, 2015-10-24 This brief describes the coordinated control of groups of robots using only sensory input and no direct external commands Furthermore each robot employs the same local strategy i e there are no leaders and the text also deals with decentralized control allowing for cases in which no single robot can sense all the others One can get intuition for the problem from the natural world for example flocking birds How do they achieve and maintain their flying formation Recognizing their importance as the most basic coordination tasks for mobile robot networks the brief details flocking and rendezvous They are shown to be physical illustrations of emergent behaviors with global consensus arising from local interactions The authors extend the consideration of these fundamental ideas to describe their operation in flying robots and prompt readers to pursue further research in the field Flocking and Rendezvous in Distributed Robotics will provide graduate students a firm grounding in the subject while also offering an authoritative reference work for more experienced workers seeking a brief but thorough treatment of an area that has rapidly gained in interest

Guiding Vector Fields for Robot Motion Control Weijia Yao, 2023-07-25 Using a designed vector field to guide robots to follow a given geometric desired path has found a range of practical applications such as underwater pipeline inspection warehouse navigation and highway traffic monitoring It is thus in great need to build a rigorous theory to guide practical implementations with formal guarantees It is even so when multiple robots are required to follow predefined desired paths or maneuver on surfaces and coordinate their motions to efficiently accomplish repetitive and laborious tasks The book introduces guiding vector fields on Euclidean spaces and Riemannian manifolds for single robot and multi robot path following and motion coordination provides rigorous theoretical guarantees of vector field guided motion control of robotic systems and elaborates on the practical implementation of the proposed algorithms on mobile wheeled robots and fixed wing aircraft It provides guidelines for the robust reliable and safe practical implementations for robotic tasks including path following navigation obstacle avoidance and multi robot motion coordination In particular the book reveals fundamental theoretic underpinnings of guiding vector fields and applies to addressing various robot motion control problems Notably it answers many crucial and challenging questions such as How to

generate a general guiding vector field on any n dimensional Riemannian manifold for robot motion control tasks Do singular points always exist in a general guiding vector field How to generate a guiding vector field that is free of singular points How to design control algorithms based on guiding vector fields for different robot motion control tasks including path following obstacle avoidance and multi robot distributed motion coordination Answering these questions has led to the discovery of fundamental assumptions a topological surgery to create a singularity free guiding vector field a robot navigation algorithm with the global convergence property a provably safe collision avoidance algorithm and an effective distributed motion control algorithm etc
