   Robust Computer Vision N. Sebe,M.S. Lew,2013-06-29 From the foreword by Thomas Huang During the past decade researchers in computer vision have found that probabilistic machine learning methods are extremely powerful This book describes some of these methods In addition to the Maximum Likelihood framework Bayesian Networks and Hidden Markov models are also used Three aspects are stressed features similarity metric and models Many interesting and important new results based on research by the authors and their collaborators are presented Although this book contains many new results it is written in a style that suits both experts and novices in computer vision   **Robust Computer Vision** N. Sebe,Michael Lew,2014-03-14 From the foreword by Thomas Huang During the past decade researchers in computer vision have found that probabilistic machine learning methods are extremely powerful This book describes some of these methods In addition to the Maximum Likelihood framework Bayesian Networks and Hidden Markov models are also used Three aspects are stressed features similarity metric and models Many interesting and important new results based on research by the authors and their collaborators are presented Although this book contains many new results it is written in a style that suits both experts and novices in computer vision   **Machine Learning in Computer Vision** Nicu Sebe,2005-06-03 The goal of this book is to address the use of several important machine learning techniques into computer vision applications An innovative combination of computer vision and machine learning techniques has the promise of advancing the field of computer vision which contributes to better understanding of complex real world applications The effective usage of machine learning technology in real world computer vision problems requires understanding the domain of application abstraction of a learning problem from a given computer vision task and the selection of appropriate representations for the learnable input and learned internal entities of the system In this book we address all these important aspects from a new perspective that the key element in the current computer revolution is the use of machine learning to capture the variations in visual appearance rather than having the designer of the model accomplish this As a bonus models learned from large datasets are likely to be more robust and more realistic than the brittle all design models   **Computer Vision - ECCV 2004** Tomas Pajdla,Jiri Matas,2004-04-30 The four volume set comprising LNCS volumes 3021 3022 3023 3024 constitutes the refereed proceedings of the 8th European Conference on Computer Vision ECCV 2004 held in Prague Czech Republic in May 2004 The 190 revised papers presented were carefully reviewed and selected from a total of 555 papers submitted The four books span the entire range of current issues in computer vision The papers are organized in topical sections on tracking feature based object detection and recognition geometry texture learning and recognition information based image processing scale space flow and restoration 2D shape detection and recognition and 3D shape representation and reconstruction   **A Guide for Machine Vision in Quality Control** Sheila Anand,L. Priya,2019-12-23 Machine Vision systems combine image processing with industrial automation One of the primary areas of application of Machine Vision in the Industry is in the area

of Quality Control Machine vision provides fast economic and reliable inspection that improves quality as well as business productivity Building machine vision applications is a challenging task as each application is unique with its own requirements and desired outcome A Guide to Machine Vision in Quality Control follows a practitioner s approach to learning machine vision The book provides guidance on how to build machine vision systems for quality inspections Practical applications from the Industry have been discussed to provide a good understanding of usage of machine vision for quality control Real world case studies have been used to explain the process of building machine vision solutions The book offers comprehensive coverage of the essential topics that includes Introduction to Machine Vision Fundamentals of Digital Images Discussion of various machine vision system components Digital image processing related to quality control Overview of automation The book can be used by students and academics as well as by industry professionals to understand the fundamentals of machine vision Updates to the on going technological innovations have been provided with a discussion on emerging trends in machine vision and smart factories of the future Sheila Anand is a PhD graduate and Professor at Rajalakshmi Engineering College Chennai India She has over three decades of experience in teaching consultancy and research She has worked in the software industry and has extensive experience in development of software applications and in systems audit of financial manufacturing and trading organizations She guides Ph D aspirants and many of her research scholars have since been awarded their doctoral degree She has published many papers in national and international journals and is a reviewer for several journals of repute L Priya is a PhD graduate working as Associate Professor and Head Department of Information Technology at Rajalakshmi Engineering College Chennai India She has nearly two decades of teaching experience and good exposure to consultancy and research She has delivered many invited talks presented papers and won several paper awards in International Conferences She has published several papers in International journals and is a reviewer for SCI indexed journals Her areas of interest include Machine Vision Wireless Communication and Machine Learning **The Theory of the Moiré Phenomenon** Isaac Amidror,2007-03-16 Since The Theory of the Moir Phenomenon was published it became the main reference book in its field It provided for the first time a complete unified and coherent theoretical approach for the explanation of the moir phenomenon starting from the basics of the theory but also going in depth into more advanced research results However it is clear that a single book cannnot cover the full breadth of such a vast subject and indeed this original volume admittently concentrated on only some aspects of the moir theory while other interesting topics had to be left out Perhaps the most important area that remained beyond the scope of the original book consists of the moir effects that occur between correlated random or aperiodic structures These moir effects are known as Glass patterns after Leon Glass who described them in the late 1960s However this branch of the moir theory remained for many years less widely known and less understood than its periodic or repetitive counterpart Less widely known because moir effects between aperiodic or random structures are less frequently encountered in everyday s life and less understood

because these effects did not easily lend themselves to the same mathematical methods that so nicely explained the classical moir effects between periodic or repetitive structures **Handbook of Research on Advanced Hybrid Intelligent Techniques and Applications** Bhattacharyya, Siddhartha,Banerjee, Pinaki,Majumdar, Dipankar,Dutta, Paramartha,2015-11-03 Conventional computational methods and even the latest soft computing paradigms often fall short in their ability to offer solutions to many real world problems due to uncertainty imprecision and circumstantial data Hybrid intelligent computing is a paradigm that addresses these issues to a considerable extent The Handbook of Research on Advanced Hybrid Intelligent Techniques and Applications highlights the latest research on various issues relating to the hybridization of artificial intelligence practical applications and best methods for implementation Focusing on key interdisciplinary computational intelligence research dealing with soft computing techniques pattern mining data analysis and computer vision this book is relevant to the research needs of academics IT specialists and graduate level students
