Rock Foundations R. Yoshinaka, K. Kikuchi, 1995-01-01 The function of rock foundations is to support large scale and or heavy structures such as high dam long span bridge nuclear power station highrise building or pylon and without risk to carry the heavy load of superstructures Those structures founded on rock generally constitute the important infrastructures for the highly developed urban life Due to the presence of discontinuities and weak layers rock masses are intrinsically discontinuous and or inhomogeneous Therefore the evaluation of bearing capacity deformation behaviour of foundation of rock stress strain distribution and seepage flow in rock mass below foundation etc is very important and intricate This book contains the recent and comprehensive results from research work on rock foundation engineering The main topics covered are investigation testing mechanical properties of rock and rock mass numerical approach bearing capacity of rock foundation seepage flow design methodology improvement and reinforcement of rock mass monitoring and behaviour of rock foundation

Pre-failure Deformation Characteristics of Geomaterials Jamiolkowski, 2001 The second of two volumes from the 1999 conference v 1 was published in 1999 makes available the opening lecture on pre failure behavior of soils as construction materials as well as 24 contributions on various themes of the conference laboratory tests in situ tests stress strain behavior applications and case histories Some specific topics include time dependent deformation characteristics of stiff geomaterials boundary value problems in geotechnical engineering and the effect of reinforcement due to choice of geogrid There is no subject index c Book News Inc
