Rock Time And Landforms:

Rock, Time, and Landforms Jerome Wyckoff, 1966 *Rocks and Landforms* John Gerrard, 2012-12-06 Geomorphology can be defined simply as the study of landforms Landforms are the result of the interaction between what Ritter 1978 has called the driving and resisting forces The driving forces or processes are the methods by which energy is exerted on earth materials and include both surface geomorphological or exogenous processes and subsurface geological or endogenous processes The resisting forces are the surface materials with their inherent resistances determined by a complex combination of rock properties Stated in these simple terms it would be expected that both sides of the equation be given equal weight in syntheses of landform evolution However this has not been the case Until about the 1950s geomorphology was mainly descriptive and concerned with producing time dependent models of landscape evolution Although the form of the land was the main focus there was little detailed mention of process and scant attention to the properties of surface materials There were of course exceptions In the late 19th century G K Gilbert was stressing the equilibrium between landforms and processes Many hydrologists were examining the detailed workings of river systems and drainage basins culminating in the classic paper of Horton 1945 **Landscapes and Landforms of Norway** Achim A. Beylich, 2020-10-04 This book discusses the striking geomorphological landscapes of mainland Norway As part of the Springer book series on World Geomorphological Landscapes it outlines the nature and diversity of Norway's geomorphological landscapes and examines the geological background and the drivers of landscape evolution It also features numerous case studies describing the most striking sites and offers insights into the status and value of geoheritage and geoconservation in the country Providing readers with an opportunity to explore the variety of Norwegian landscapes and landforms through informative texts richly illustrated with color maps and photos the book will appeal to scientists scholars and any readers interested in geology physical geography geomorphology landscape tourism geoheritage and environmental protection **Landscapes and Landforms of Nigeria** Adetoye Faniran, Lawrence Kosoko Jeje, Olutoyin A. Olusola, 2023-02-28 The book deals with the most striking landscapes and landforms of Nigeria Attention is paid to the diversity of geomorphic features found in the country from the coast to the extreme north approached geographically at the national regional and local scales with a view to highlight the combined influence of geological climatic biotic and anthropogenic influences as well as geoheritage potentials The topics and sites described range from the mainly depositional coastal lagoons and inlets the most prominent of which is the oil rich Niger Delta characterized by the mangrove and rain forest both of which have been seriously modified by human impact through the coastal lowlands and associated hill country with derived deciduous and dry forest vegetation the very prominent Niger Benue Trough and associated features the savanna semi desert covered high plains of the north and the Chad Basin each of which features spectacular landscapes and landforms including human made forms such as cities and cityscapes The book provides the readers with the opportunity to explore the variety of Nigerian

Periglacial Landscapes of Europe Marc Oliva, Daniel Nývlt, José M Fernández-Fernández, 2023-01-01 This book comprehensively presents the geography of landforms linked to periglacial processes across Europe The landscape of the European cold climate regions both at high latitudes and in mountainous environments represent the lingering minimal expression of the glaciers In addition periglacial elements can be found in temperate regions where temperatures no longer favor periglacial processes so landforms are therefore inherited from previous cold phases The book is divided into five parts an introductory section on climate variability responsible for periglacial dynamics across Europe a second part including 3 blocks on periglacial landforms in southern central and northern Europe and a final chapter providing a more general perspective on the impact of periglacial processes on the landscape of Europe The book offers a valuable reference guide for scientists from all disciplines interested in cold climate processes as well as readers outside academia territorial managers environmentalists mountaineers politicians engineers etc

Schroder, 2004-06-30 From the reviews Bishop and Schroder both Univ of Nebraska at Omaha have brought together an impressive group of practitioners in the relatively new application of geographic information science to mountain geomorphology In doing so they have produced valuable first

overall coverage of a high tech approach to mountain three dimensional research More than 40 contributing authors discuss a wide range of related aspects The book is well bound and well produced each chapter provides an extensive source of references The numerous line drawings are clearly reproduced although the mediocre quality of photographic reproduction limits the value of air photographs and satellite images As is characteristic of many edited collections there is some variation in chapter quality Some of the writing is so dense that it requires minute concentration one chapter for instance has 14 pages of references from a total of 43 pages Nevertheless this is a vital compendium for a rapidly expanding field of research Summing Up Recommended Upper division undergraduates through professionals J D Ives Choice March 2005
