Reh,Ernst R. Tamm,David Beebe,Peter Bex,Paul Bishop,Dean Bok,Patricia D'Amore,Henry Edelhauser,Linda Mcloon,Jerry Niederkorn,2010-05-27 As the first comprehensive reference for the eye its support structures diseases and treatments Encyclopedia of the Eye is an important resource for all visual scientists ophthalmologists and optometrists as well as researchers in immunology infectious disease cell biology neurobiology and related disciplines This four volume reference is unique in its coverage of information on all tissues important for vision including the retina cornea and lens It also covers the physiological and pathophysiologic processes that affect all eye tissues This Encyclopedia is invaluable for graduate students and postdoctoral fellows who are seeking an introduction to an area of eye research Each chapter explains the basic concepts and provides references to relevant chapters within the Encyclopedia and more detailed articles across the wider research literature The Encyclopedia is also particularly useful for visual scientists and practitioners who are researching a new area seeking deeper understanding of important research articles in fields adjacent to their own or reviewing a grant outside their immediate area of expertise Written by experts at a level that permits students to grasp key elements of a specific subject Provides an entryway into the major features of current eye research No other source puts this much information so well indexed and with so many helpful full color figures and graphics in the hands of the ophthalmic scientist *Boating* ,1998-01 *The Molecular Mechanism of Photoreception* H. Stieve,Henning Stieve,2012-12-06 very important especially the comparison of vertebrate and invertebrate transduction mechanisms The workshop was very successful and the outcome of the discussions proved it worth the effort To no small extent has that success been made possible by Dr Silke Bernhard who with a combination of authority and charm together with her extremely efficient and

dedicated staff organized this workshop providing the conditions and framework for a scientific debate of outstanding quality in a friendly and pleasant atmosphere. The great majority of participants were also very committed to making this workshop successful. Besides the reports of the four discussion groups, this publication contains the background papers which were revised by the authors partly as a result of suggestions of some participants. I hope this book will give a fair overview of the state of our knowledge of research in visual transduction. It was a pleasure to edit especially because of the friendly and very efficient commitment of K Geue, J Lupp and A Eckert and the cooperativeness of most of the contributors. Particularly I would like to acknowledge gratefully the extensive efforts and patience of the four rapporteurs: M L Applebury, W H Miller, W G Owen and E N Pugh Jr in compiling, writing and revising the group reports.
