The $RO(G)$ -Graded Equivariant Ordinary Homology of G -Cell Complexes with Even-Dimensional Cells for $G=\mathbb{Z}/p$, The $Ro(g)$ -Graded Equivariant Ordinary Homology of G -Cell Complexes with

Even-Dimensional Cells for $G=\mathbb{Z}$ Kevin K. Ferland,2014-09-11 It is well known that the homology of a CW complex with cells only in even dimensions is free The equivariant analog of this result for G cell complexes is however not obvious since $RO\ G$ graded homology cannot be computed using cellular chains This book considers $G\ \mathbb{Z}/p$ and studies G cell complexes *On the $RO(G)$ -graded Equivariant Ordinary Cohomology of Generalized G -cell Complexes for G* Kevin K. Ferland,L. Gaunce Lewis,Syracuse University,1999 It is well known that the cohomology of a finite CW complex with cells only in even dimensions is free The equivariant analog of this result for generalized G cell complexes is however not obvious since $RO\ G$ graded cohomology cannot be computed using cellular chains We consider $G\ \mathbb{Z}/p$ and study G spaces that can be built as cell complexes using the unit disks of finite dimensional G representations as cells Our main result is that if X is a G complex containing only even dimensional representation cells and satisfying certain finite type assumptions then the $RO\ G$ graded equivariant ordinary cohomology is free as a graded module over the cohomology of a point This extends a result due to Gaunce Lewis about equivariant complex projective spaces with linear \mathbb{Z}/p actions Our new result applies more generally to equivariant complex Grassmannians with linear \mathbb{Z}/p actions *The $RO(G)$ -Graded Cohomology of the Equivariant Classifying Space $BGSU_2$* Zev Chonoles,2018 The key tools used are equivariant even dimensional freeness and multiplicative comparison theorems for G cell complexes both proven by Lewis in Lew88 and subsequently refined by Shulman in Shu10 and with the former theorem extended by Basu and Ghosh in BG16 The latter theorem enables us to compute the multiplicative structure of the cohomology of BC_2SU_2 by embedding it in a direct sum of cohomology rings whose structure is more easily understood Both theorems require the cells of the G cell complex to be attached in a well behaved order and a significant step in our work is to give BC_nSU_2 a satisfactory C_n cell complex structure **Homology of Cell Complexes**
