Role Of Mhc And Nonmhc Antigens In Allograft Immunity:

The Role of MHC and Non-MHC Antigens in Allograft Immunity T. Mohanakumar, 1994-01-01 Minor histocompatibility antigens MHA are a group of cell surface membrane proteins that are able to exclusively mediate a cellular immune response. These antigens Ag were initially distinguished from major histocompatibility antigens MHC by their weak immunogenicity in allograft transplants. As information describing their structure and function accumulated, the term MHA was misleading because these immunogens were neither weak nor minor. It became clear that non MHC histocompatible antigens non MHC HA was a more appropriate name. Non MHC HA are involved not only in transplantation but also in defining immunologic self and shaping the T cell repertoire. This book investigates the biology of the non MHC HA and their role in clinical medicine.

Transplant International Official Journal of the European Society for Organ Transplantation G. Opelz, W.A. Buurman, J.P. van Hooff, P. MacMaster, J. Wallwork, 2013-11-11 This supplement to Transplant International contains the Proceedings of the successful 5th Congress of the European Society for Organ Transplantation held in Maastricht from 7-10 October 1991. Of 827 abstracts submitted to the congress, 548 were selected by the Scientific Committee for either oral or poster presentation. Of these 548 presentations, the guest editors selected 212 full papers for publication in this book. Two aspects are important where proceedings are concerned: the quality of the papers and the speed of publication. I thank our authors and guest editors whose combined expertise has given us a guarantee of quality. I also thank our editorial and production teams for their tremendous efforts to hasten editing, proofreading, printing and publication. In particular, I would like to express my gratitude to Maurits Booster M.D. and Sylvia van Roosmalen for their assistance and support in seeing this supplement through to completion. As a concession to time, we have waived some of our stringent rules of style and limited our correspondence with authors by, for example, page proofs being reviewed and corrected in-house only. This enables us to publish two months earlier but has the disadvantage that given the allotted time, we have not been able to ensure that each and every article has an abstract nor that every item has been dotted in the reference lists or in the addresses/institute affiliations of all the authors.

Fundamentals of Immunology

Otto G. Bier, Wilmar Dias Da Silva, Dietrich Götze, Ivan Mota, 2012-12-06 The good acceptance of this textbook is an indication that it has served its purpose The present edition has been prepared in order to cover the main progress achieved in the five years that have elapsed since the first edition The structure of the book remains essentially the same but a considerable amount of new material has been introduced particularly in certain areas such as the genetics of immunoglobulins and T cell receptor the regulation of the immune response hypersensitivity reactions and cellular immunology Today immunology is essential for biologists in general and in particular for physicians veterinarians and pathologists The great progress and diversification that has taken place in the last few years is due to its enormous value both for the understanding of theoretical biology and for the practical resolution of biochemical genetic pathological and biological problems Greatly contributing to this progress have been relatively sophisticated techniques such as immunofluorescence radioimmune assay transmission electron microscopy scanning electron microscopy isoelectric focusing quantitative cytofluorimetry affinity chromatography and techniques that allow separation of the different lymphocyte subpopulations A potentially fabulous field was recently opened with the development of techniques for obtaining monoclonal antibodies by fusion of immunologically active lymphocytes with myeloma cells These hybrid cells produce large amounts of monoclonal antibodies or other lymphocyte factors The establishment of this hybridoma technology that is already routine in most laboratories is being used in the resolution of general biology problems particularly in the study of the various cell surface molecules
