Role Of Rna And Dna In Brain Function:

Role of RNA and DNA in Brain Function Antonio Giuditta, Claire Zomzely-Neurath, Barry B. Kaplan, 2012-12-06 There was once an old Chinese man working on a hill with a boy On the plain near the sea rested the village the inhabitants eagerly engaged in their daily activities Suddenly the old man noticed that a huge wave far distant in the sea was approaching the shore endangering all The only safe place was the hill So he began waving his hands and screaming aloud to no avail The villagers were too busy with their own work and paid little heed to the old man who was considered a bit eccentric But soon flames were on the hill the wheat fields ablaze The old man had resorted to this ultimate step to alert his fellow citizens Now they all went running towards him angry about their burning crop and in the process avoided the imminent danger For some mysterious reason my mind focused on this story prior to the Symposium on the Role of DNA which took place in Ravello Italy at the end of May 1985 Having made a call for people to meet and reflect for a few days the analogy began to take shape Ravello was indeed a hill magically overlooking the sea from medieval quarters True its countryside is filled with vineyards not wheat fields but that is an improvement on the story However what was the wave Perhaps the growing amount of data on cloned brain genes that threatens to engulf neurobiologists *Epigenetic Mechanisms of Neurogenesis in the Developing*

Psychopharmacology Abstracts ,1976 Research Awards Index ,1988 **Alternative Splicing in Brain Function** Kif Liakath-Ali,Matthias Soller,2023-12-13 Functional and structural intricacies of biological systems emerge from the complex nature of the genome A key aspect of genome complexity can be attributed to the process of alternative splicing of precursor mRNA or pre mRNA during which introns are removed and exons are selectively spliced together This highly regulated process generates different mature mRNA transcripts from a single gene and is widespread throughout the eukaryotic evolution The majority of the genes expressed in the mammalian central nervous system undergo extensive alternative splicing Some genes can generate more than a thousand isoforms resulting in diverse proteoforms that can differ in their function binding preference catalytic activity and localization Perturbation in alternative splicing has been linked to many neurological disorders Despite its significance we still lack a comprehensive understanding of its role in neuronal function Recent studies suggest that alternative splicing is a regulator of tissue identity and development This is particularly relevant to the brain where developmental regulation and heterogenous cell population play a crucial role in shaping its function For a long time technological limitations in detecting and measuring alternatively spliced transcripts hindered the progress in understanding the biology of alternative splicing Recent advances in long read and native mRNA sequencing and robust computational tools allow us to capture and quantify in their full length form Public transcriptomics datasets can be utilized for the meta analysis of alternative splicing landscapes of various experimental conditions and disease samples In addition protein isoform detection complements mRNA isoform levels Given its biological significance and recent advances the objective of this Research Topic is to assemble current knowledge views and challenges in the studies of alternative splicing in brain function Emerging Roles of Long Noncoding RNAs in Neurological Diseases and Metabolic Disorders Yingqun Huang,Romano Regazzi,William Cho,2015-07-21 Long noncoding RNAs lncRNAs are a new class of transcripts that are in general longer than 200 nucleotides and that have no protein coding potential The vast majority of vertebrate genomes encode diverse and complex lncRNAs that play regulatory roles at almost every step of gene expression Recently increasing evidence has implicated lncRNAs in the pathogenesis of various human diseases The purpose of the Research Topic Emerging roles of long noncoding RNAs in neurological diseases and metabolic disorders is to bring together leading researchers in the field who through contributing to an organized and comprehensive collection of peer reviewed articles provide a broad perspective on the latest advances in the field A number of interesting and cutting edge areas will be covered as below but this list is not exclusive The methodologies and technologies of identifying and studying lncRNAs
