Materials Synthesis Based On Biological Processes Vol 218 Materials Research Society Symposium Proceedings:

Structure, Cellular Synthesis and Assembly of Biopolymers Steven T. Case, 2013-06-29 Many naturally occurring biopolymers have unique structures and unique physical or mechanical properties. The understanding of the molecular basis of these biomolecules, their synthesis, assembly and processing is a prerequisite for any application to the design of novel biomolecular materials. Several classes of biopolymers are sampled in depth in this volume such as nanolaminated ceramics, adhesive proteins, eggshell proteins, protein fibres and silk which are synthesized by a variety of organisms: molluscs, parasitic trematodes, fish and insects. The reader will be introduced to the biological systems to understand Nature's use of each biopolymer and the highly differentiated cells responsible for their synthesis. Corresponding to the variety of organisms and possible applications of biopolymers, the combined expertise of interdisciplinary teams of scientists such as the authors of this volume have the greatest opportunity to decipher and exploit Nature's skill in biopolymer engineering. **Materials**

Materials Reliability Issues in Microelectronics: Volume 225 James R. Lloyd, Frederick G. Yost, Paul S. Ho, 1991-10-22 With the increased complexity of modern integrated circuits it is important that reliability problems be attacked properly with the appropriate tools. This volume recognizes that almost all reliability problems are materials problems and helps to put reliability physics on a firm scientific foundation. Topics include electromigration, stress effects on reliability, stress and packaging, metallization, device oxide and dielectric reliability, new investigative techniques, corrosion.

This volume reviews the state of the art of synthetic techniques and processing procedures for assembling these structures.
