development of children's acquisition of 21st century skills and digital competences. Consequently many education scholars have argued that teaching technology to young children is vital in keeping up with 21st century employment patterns. Technologies such as those that involve robotics or coding apps come at a time when the demand for computing jobs around the globe is at an all time high while its supply is at an all time low. There is no doubt that coding with robotics is a wonderful tool for learners of all ages as it provides a catalyst to introduce them to computational thinking, algorithmic thinking and project management. Additionally recent studies argue that the use of a developmentally appropriate robotics curriculum can help to change negative stereotypes and ideas children may initially have about technology and engineering. The Handbook of Research on Using Educational Robotics to Facilitate Student Learning is an edited book that advocates for a new approach to computational thinking and computing education with the use of educational robotics and coding apps. The book argues that while learning about computing young people should also have opportunities to create with computing which have a direct impact on their lives and their communities. It develops two key dimensions for understanding and developing educational experiences that support students in engaging in computational action: 1 computational identity which shows the importance of young people's development of scientific identity for future STEM growth and 2 digital empowerment to instill the belief that they can put their computational identity into action in authentic and meaningful ways. Covering subthemes including student competency and assessment, programming education and teacher and mentor development, this book is ideal for teachers, instructional designers, educational technology developers, school administrators, academicians, researchers and students.

Supporting Transfer Student Success Peggy L. Nuhn, Karen F. Kaufmann, 2020-11-06. This research based book with practical applications teaches academic librarians to support their transfer students effectively at both universities and community colleges even when transfer students' information literacy needs differ from those of other students. Colleges and universities across the United States serve a large and growing population of transfer students. Current estimates suggest that more than one third of college students transfer from one institution of higher education to another at least once. At some institutions transfer students compose up to fifty to sixty percent of the new incoming class. Academic librarians' understanding of the demographics and potential needs of transfer students is essential to supporting their success and mitigating transfer shock. Just as public libraries often bridge gaps

between individuals and services academic libraries can proactively support the often unique needs of transfer students by spearheading textbook affordability initiatives developing innovative programming and making appropriate referrals to non library student services In this practical guide to supporting transfer students authors Peggy L Nuhn and Karen F Kaufmann teach academic librarians how to optimize information literacy instruction support research help reduce stress and connect the library to virtual students They emphasize the importance of establishing partnerships with feeder institutions and other campus departments to best support transfer student success *Teaching World History Using the Internet* Carol
