New Developments In Industrial Wastewater Treatment:

New Developments in Industrial Wastewater Treatment Aysen Türkman,O. Uslu,2012-12-06 The main subject of the Workshop was the new developments about the cost effective treatment techniques for better removal efficiencies and discussion of policies for pollution control Although effluent water quality requirements differ from one country to another their application will be an efficient mean for water pollution control Specific promotion should be provided for polluters to meet the effluent water quality requirements Results of pilot scale studies demonstrate the applicability of and advantages of sequencing batch reactor technology for pretreatment of industrial wastewaters Fixed film biological reactors offer the possibility to enrich slow growing specialized microorganisms by developing biofilms on support materials Physical chemical processes are used for the treatment of unusual and difficult industrial wastewaters and membrane technologies for the concentration and recovery of raw materials and by products in industries where the conventional treatment technologies are inappropriate or uneconomic Physical chemical processes give higher efficiencies when polymers are applied but the composition of these long chain chemicals is an important consideration Most developing countries suffer from severe environmental problems and shortage of energy and resources These countries urgently need simple inexpensive and integrated environmental protection system which combine wastewater treatment with recovery and reuse Anaerobic treatment offer many advantages in this respect Because recovery of substances from wastes serves twofold purpose of recycle and pollution control it must be applied where possible

Biological Treatment of Industrial Wastewater Maulin P Shah, 2021-11-18 Many industrial processes use water as a solvent and therefore produce wastewater containing chemicals from that process. The amounts of these chemicals and the types will vary hugely depending on the industry and the processes running and may include things that are hazardous to health or the environment. This makes the treatment of industrial wastewater both extremely important and highly complex. One route for industrial wastewater treatment is the use of bioreactors. *Biological Treatment of Industrial Wastewater* presents a comprehensive overview of the latest advances and trends in the use of bioreactors for treating industrial wastewater. Several different types of bioreactor and their applications are discussed alongside trends and considerations important in designing bioreactors. Bringing together a wealth of different approaches and voices, this book will be a useful resource for anyone working in water treatment or looking at how industrial processes can be made more environmentally friendly.
