New Directions In Terahertz Technology:

New Directions in Terahertz Technology J.M. Chamberlain, R.E. Miles, 2012-12-06 A detailed study of the science engineering and applications of terahertz technology based on room temperature solid state devices which are seen as the key technology for wider applications in this frequency range The relative merits of electronic and optical devices are discussed and new device principles identified Issues of terahertz circuit design implementation and measurement are complemented by chapters on current and future applications in communications sensing and remote surveillance Audience The unique coverage of all aspects of terahertz technology will appeal to both new and established workers in the field as well as providing a survey for the interested reader **Terahertz Technology** Ali Rostami, Hassan Rasooli, Hamed Baghban, 2010-11-25 The book presents information about Terahertz science Terahertz photodetectors and Terahertz Lasers A special emphasis is given to room temperature operation of long wavelength photodetectors based on novel quantum dots Centered Defect Spherical Quantum Dots Moreover a complete analysis of systems based on Quantum Cascade structures to detect far infrared wavelengths is provided Finally the book presents Terahertz laser principles considering multi color lasers in this range of wavelengths Written as a background for graduate students in the Optics field *Terahertz Sources and Systems* R.E. Miles, P. Harrison, D. Lippens, 2012-12-06 Terahertz technology has moved on from being a useful but expensive circuit technique applied largely in astronomy and space science to become a subject in its own right with important applications terahertz imaging in particular Indeed the driving force in terahertz technology is currently imaging and spectroscopy We now have the means to obtain images and chemical information in this frequency band The images reproduced in this volume are striking and not surprisingly the clinical and analytical uses are the subject of intense activity There is still however no complete range of active THz electronic components but an encouraging conclusion of the book is that THz electronics will become necessary in communications systems in the foreseeable future Terahertz technology has come of age and the future lies open to new exciting science and vital applications *Terahertz Frequency Detection and Identification of Materials and Objects* R.E. Miles, X.-C. Zhang, H. Eisele, A. Krotkus, 2007-09-08 Terahertz frequency sensing has a unique part to play in the detection and identification of materials and objects This frequency range corresponding to a wavelength of around 0.1 mm can be used to identify materials from their molecular spectra and to produce images of concealed objects Terahertz spectra of drugs of abuse and explosives presented by a number of the contributing authors show that the presence of these materials can be detected in envelopes packages and through clothing The technology of terahertz detection has largely been developed around expensive and bulky femtosecond laser systems but as described in this book advances in semiconductor superlattice technology are leading to compact electronic sources such as the quantum cascade laser two terminal Gunn type oscillators and even a THz frequency amplifier These advances towards electronic as opposed to optical THz systems mean that the technology will become portable and much less costly Terahertz remote

sensing is also discussed with the possibility of detection over distances of up to 30m using existing technology or even through the use THz waves generated locally in the vicinity of a target using only air as the transducer
