New Glass:

Construction Review, 1990 **Federal Register**, 1944-09 **Research and Development in Applied Optics and Optical Glass at the National Bureau of Standards** Irvine Clifton Gardner, Clarence H. Hahner, 1949 Nick Mount Tony Hanning, 2013-03 Nick Mount is one of the world's leading glass artists. In his sixtieth year, he was honoured with a major exhibition in Pittsburgh, Pennsylvania, as well as the Object Living Treasure Award. This book, written in the style of an extraordinary yarn, is not so much about Nick Mount's achievements as a glass artist as it is about the elements that have shaped his career and continue to inform his work. His philosophy, work ethic, and environment, peers, and family have all been factors in his work and success. Together, they form the fabric of his work. Nick Mount has received numerous awards, including the Bavarian State Prize in Germany, an Australia Council Fellowship, and the Arts SA Triennial Project Grant. He acknowledges the honour of being able to work with his hands and has enormous gratitude for a lifetime of assistance from Dr and Mrs G J Mount, Pauline Hugo Peta, and Pip. Nick Mount's *The Fabric of Work* is richly illustrated with photographs of Nick's pieces, including many made recently. These vibrant works range from the extraordinary flamboyant scent bottles to more recent wood and glass fruit pieces that reflect a lush quietude. Why Things Break Mark Eberhart, 2007-12-18 Did you know? It took more than an iceberg to sink the Titanic. The Challenger disaster was predicted. Unbreakable glass dinnerware had its origin in railroad lanterns. A football team cannot lose momentum. Mercury thermometers are prohibited on airplanes for a crucial reason. Kryptonite bicycle locks are easily broken. Things fall apart is more than a poetic insight; it is a fundamental property of the physical world. *Why Things Break* explores the fascinating question of what holds things together for a while, what breaks them apart, and why the answers have a direct bearing on our everyday lives. When Mark Eberhart was growing up in the 1960s, he learned that splitting an atom leads to a terrible explosion, which prompted him to worry that when he cut into a stick of butter, he would inadvertently unleash a nuclear cataclysm. Years later, as a chemistry professor, he remembered this childhood fear when he began to ponder the fact that we know more about how to split an atom than we do about how a pane of glass breaks. In *Why Things Break*, Eberhart leads us on a remarkable and entertaining exploration of all the cracks, clefts, fissures, and faults examined in the field of materials science and the many astonishing discoveries that have been made about everything from the explosion of the space shuttle Challenger to the crashing of your hard drive. Understanding why things break is crucial to modern life on every level, from personal safety to macroeconomics, but as Eberhart reveals here, it is also an area of cutting-edge science that is as provocative as it is illuminating.
