Rhoads, John Malone Howard, 1963 *Z User Workshop, York 1991* J. E. Nicholls, 2012-12-06 In ordinary mathematics an equation can be written down which is syntactically correct but for which no solution exists For example consider the equation  $x \times 1$  defined over the real numbers there is no value of  $x$  which satisfies it Similarly it is possible to specify objects using the formal specification language Z 3 4 which can not possibly exist Such specifications are called inconsistent and can arise in a number of ways Example 1 The following Z specification of a function  $f$  from integers to integers  $f : \mathbb{Z} \rightarrow \mathbb{Z}$  is inconsistent because axiom i gives  $f(0) = 1$  while axiom ii gives  $f(0) = 2$  This contradicts the fact that  $f$  was declared as a function that is  $f$  must have a unique result when applied to an argument Hence no such  $f$  exists Furthermore iff  $f(0) = 1$  and  $f(0) = 2$  then  $1 = 2$  can be deduced From  $1 = 2$  anything can be deduced thus showing the danger of an inconsistent specification Note that all examples and proofs start with the word Example or Proof and end with the symbol  $\square$
