New Knowledge In The Biomedical Sciences:

New Knowledge in the Biomedical Sciences W.B. Bondeson,H. Tristram Engelhardt Jr.,S.F. Spicker,J.M.

White,1982-01-31 The spectacular development of medical knowledge over the last two centuries has brought intrusive advances in the capabilities of medical technology These advances have been remarkable over the last century but especially over the last few decades culminating in such high technology interventions as heart transplants and renal dialysis These increases in medical powers have attracted societal interest in acquiring more such knowledge They have also spawned concerns regarding the use of human subjects in research and regarding the byproducts of basic research as in the recent recombinant DNA debate As a consequence of the development of new biomedical knowledge physicians and biomedical scientists have been placed in positions of new power and responsibility The emergence of this group of powerful and knowledgeable experts has occasioned debates regarding the accountability of physicians and biomedical scientists But beyond that the very investment of resources in the acquisition of new knowledge has been questioned Societies must decide whether finite resources would not be better invested at this juncture or in general in the alleviation of the problems of hunger or in raising general health standards through interventions which are less dependent on the intensive use of high technology To put issues in this fashion touches on philosophical notions concerning the claims of distributive justice and the ownership of biomedical knowledge

Public Health Service Publication , **The Growth of Medical Knowledge** H.A. Ten Have,G.L Kimsma,S.F. Spicker,2012-12-06 The growth of knowledge and its effects on the practice of medicine have been issues of philosophical and ethical interest for several decades and will remain so for many years to come The outline of the present volume was conceived nearly three years ago In 1987 a conference on this theme was held in Maastricht the Netherlands on the occasion of the founding of the European Society for Philosophy of Medicine and Health Care ESPMH Most of the chapters of this book are derived from papers presented at that meeting and for the purpose of editing the book Stuart Spicker Ph D joined two founding members of ESPMH Henk ten Have and Gerrit Kimsma The three of them successfully brought together a number of interesting contributions to the theme and ESPMH is grateful and proud to have initiated the production of this volume The Society intends that annual meetings be held in different European countries on a rotating basis and to publish volumes related to these meetings whenever feasible In 1988 the second conference was held in Aarhus Denmark on Values in Medical Decision Making and Resource Allocation in Health Care In 1989 a meeting was held in Czestochowa Poland on European Traditions in Philosophy of Medicine From Brentano to Bieganski It is hoped that these conferences and the books to be derived from them will initiate a new European tradition lasting well into the 21 st century P J

DATA SCIENCE WITH SEMANTIC TECHNOLOGIES This book will serve as an important guide toward applications of data science with semantic technologies for the upcoming generation and thus becomes a unique resource for scholars researchers professionals and practitioners in this field To create intelligence in data science it becomes necessary to utilize semantic technologies which allow machine readable representation of data This intelligence uniquely identifies and connects data with common business terms and it also enables users to communicate with data Instead of structuring the data semantic technologies help users to understand the meaning of the data by using the concepts of semantics ontology OWL linked data and knowledge graphs These technologies help organizations to understand all the stored data adding the value in it and enabling insights that were not available before As data is the most important asset for any organization it is essential to apply semantic technologies in data science to fulfill the need of any organization Data Science with Semantic Technologies provides a roadmap for the deployment of semantic technologies in the field of data science Moreover it highlights how data science enables the user to create intelligence through these technologies by exploring the opportunities and eradicating the challenges in the current and future time frame In addition this book provides answers to various questions like Can semantic technologies be able to facilitate data science Which type of data science problems can be tackled by semantic technologies How can data scientists benefit from these technologies What is knowledge data science How does knowledge data science relate to other domains What is the role of semantic technologies in data science What is the current progress and future of data science with semantic technologies Which types of problems require the immediate attention of researchers Audience Researchers in the fields of data science semantic technologies artificial intelligence big data and other related domains as well as industry professionals software engineers scientists and project managers who are developing the software for data science Students across the globe will get the basic and advanced knowledge on the current state and potential future of data science **Mormonism, Medicine, and Bioethics** Courtney S. Campbell,2021-02-03
Mormonism Medicine and Bioethics provides the first comprehensive treatment of principles and positions on questions of bioethics encountered by members professionals and ecclesiastical leaders of The Church of Jesus Christ of Latter day Saints LDS or Mormon The book addresses three fundamental features of a coherent religious bioethics precepts for practical decision making general ethical principles and core religious convictions that give a distinctive motivation for personal communal and professional integrity LDS ethical principles of love hospitality to strangers covenantal solidarity justice and moral agency are integrated with central topics in bioethics including abortion genetic testing and enhancements in vitro fertilization medical assisted death medicinal marijuana neonatal intensive care organ donation preventive health care universal access to care and vaccinations This book uses first person experiences to give voice to the lived moral realities of Latter day Saints as they experience difficult and wrenching ethical questions and choices as persons family members

community members professionals and as citizens within the context of their distinctive faith convictions It situates these communal conversations within the broader discourse of bioethics and thereby supports both bioethics and religious literacy

Mormonism Medicine and Bioethics also examines circumstances in which The Church of Jesus Christ of Latter day Saints engages in a moral witness of its values on matters of public policy such as legalization of physician assisted death of elective abortion and of medicinal marijuana The book concludes with a distinctive normative argument on why LDS ethical principles and practices require support of universal access to an adequate level of health care for all persons It provides an appendix of significant LDS ecclesiastical policies on medical health and moral issues making it a definitive educational and reference compilation

Logic and Critical Thinking in the Biomedical Sciences Jules J. Berman,2020-07-08 All too often individuals engaged in the biomedical sciences assume that numeric data must be left to the proper authorities e g statisticians and data analysts who are trained to apply sophisticated mathematical algorithms to sets of data This is a terrible mistake Individuals with keen observational skills regardless of their mathematical training are in the best position to draw correct inferences from their own data and to guide the subsequent implementation of robust mathematical analyses Volume 2 of Logic and Critical Thinking in the Biomedical Sciences provides readers with a repertoire of deductive non mathematical methods that will help them draw useful inferences from their own data Volumes 1 and 2 of Logic and Critical Thinking in the Biomedical Sciences are written for biomedical scientists and college level students engaged in any of the life sciences including bioinformatics and related data sciences Demonstrates that a great deal can be deduced from quantitative data without applying any

statistical or mathematical analyses Provides readers with simple techniques for quickly reviewing and finding important relationships hidden within large and complex sets of data Using examples drawn from the biomedical literature discusses common pitfalls in data interpretation and how they can be avoided *Departments of Labor and Health, Education, and Welfare Appropriations for 1965* United States.
