Sicilian Street Foods and Chemistry Michele Barone, Alessandra Pellerito, 2020-09-03 This book reviews the authenticity of certain Street Food specialties from the viewpoint of food chemists At present the food market clearly shows

the predominance of fast food operators in many Western countries. However, the concomitant presence of the traditional lifestyle model known as the Mediterranean Diet in Europe has also been increasingly adopted in many countries in some cases with unforeseen effects such as offering Mediterranean like foods for out of home consumption. This commercial strategy also includes the so called Street Food which is marketed as a variation on Mediterranean foods. One of the best known versions of Street Food products can be found in Sicily Italy and particularly in its largest city Palermo. Because of certain authenticity issues the Italian National Council of Research Chemists has issued four procedural guidelines for various Palermo specialties with the aim of attaining the traditional specialty guaranteed status in accordance with European Regulation EU No 1151/2012. The first chapter of the book provides a brief introduction to the general concept of Street Foods. The remaining four chapters describe four food specialties: Arancina, Sfincione, Pane ca meusa and Pane e panelle typically produced in Palermo with particular reference to their chemical composition, identification of raw materials from a chemical viewpoint, permissible cooking and preparation procedures with chemical explanations, preservation and storage. The book offers a unique guide to Street Food authenticity and can also serve as a reference work for other traditional historical products.
