Novel Biodegradable Microbial Polymers E.A. Dawes, 2012-12-06 The NATO Advanced Research Workshop from which this book derives was conceived during Biotec 88 the Second Spanish Conference on Biotechnology held at Barcelona in June 1988 The President of the Conference Dr Ricardo Guerrero had arranged sessions on bacterial polymers which included lectures by five invited participants who together with Dr Guerrero became the Organizing Committee for a projected meeting that

would focus attention upon the increasing international importance of novel biodegradable polymers The proposal found favour with the NATO Science Committee and with Dr R Clinton Fuller and Dr Robert W Lenz as the co Directors Dr Edwin A Dawes as the Proceedings Editor and Dr Hans G Schlegel Dr Alexander J B Zehnder and Dr Ricardo Guerrero as members of the Organizing Committee the meeting quickly took shape To Dr Guerrero we owe the happy choice of Sitges for the venue a pleasant coastal resort 36 kilometres from Barcelona which proved ideal The sessions were held at the Palau de Maricel in appropriately impressive surroundings and invaluable local support was provided by Mr Jordi Mas Castella and by Ms Merce Piqueras Much of the preparatory work fell upon the broad shoulders of Mr Edward Knee whose efforts are deeply appreciated The Organizing Committee hopes that this Workshop will prove to be the first of a series which will aim to keep abreast of a rapidly expanding and exciting area of research that is highly relevant to environmental and industrial interests

Chitin in Nature and Technology G.W. Gooday, C. Jeuniaux, R. Muzzarelli, 2012-12-06 Exegi monumentum ael perennius The monument I have built will last longer than bronze Horace My previous book Chitin 1977 was listed by the publisher as a key research book among the most requested books by libraries It received favorable comments from each of the journals which reviewed it Science 198 28 Oct 1977 Physiological Entomology 2 4 Dec 1977 The Canadian Institute of Food Science and Technology Journal April 1978 The Quarterly Review of Biology 53 361 1978 Oceanographic Abstracts 15 182 1979 Annales de Zoologie Ecologie Animale 11 127 1979 and Enzyme Microbial Technology 2 1980 The variety of these journals testifies to the interdisciplinary character of chitin studies Chitin has really been a landmark to use the definition given by Science because it stimulated interest in the less known polysaccharides and in modified chitins besides chitin itself to the point that three International Conferences on Chitin Chitosan were convened Boston U S A 1977 Sapporo Japan 1982 and Senigallia Italy 1985 In convening the 3rd International Conference on Chitin Chitosan 1 4 April 1985 one of the main objectives was the preparation of the present book While the proceedings of the previous two Conferences were very valuable they did not appear in any book catalogs and this severely limited their distribution

Physical Techniques for the Study of Food Biopolymers S.B. Ross-Murphy, 2012-11-26 This preface is very short not least because an introductory chapter incorporating much of the material of a conventional preface has been included and covers most of the important points in somewhat greater detail than we have scope for here The reader should consult this as a guide to the structure of this volume and the purpose it serves Nevertheless some general comments are pertinent At a practical level some understanding of the properties of food biopolymers is presumably historical perhaps dating back to the invention of fire when stone age man first discovered that heating animal carcasses increased their palatability Indeed one is reminded of the essay of Charles Lamb in which he claims that roast pork was first discovered by accident when the pig sty of an ancient Chinese village was accidentally burnt to the ground consuming its unfortunate occupants In the last 20 years however substantial scientific advances have been made in this area by the application of ideas perhaps more common in other areas

of macromolecular science to food biopolymer constituents and this knowledge is now being applied in a non empirical manner to the development of new products One very successful example of this approach is the work on low fat healthy option products in which understanding of the thermodynamics interactions structure and rheology of mixed protein polysaccharide gelling systems is being employed The present volume describes the application of modern macro molecular techniques to the characterisation of food biopolymers *New Technical Books* New York Public Library,1988

Water in Foods Fito,Mulet,McKenna,2013-10-22 Water in Foods Fundamental Aspects and their Significance in Relation to Processing of Foods contains the proceedings of the Fifth International Symposium on the Properties of Water in Foods ISOPOW V held in Peniscola Valencia Spain on November 8 14 1992 Organized into 31 chapters each chapter representing the papers presented in the meeting this book begins with a review of the theoretical aspects of hydration Some chapters follow discussing the basic physical chemistry and links between hydration and solute interactions computer modeling studies of the interaction of water with carbohydrates and theories of liquid glass transition This book also describes the NMR imaging in the study of diffusion of water in foods mechanical properties of frozen model solutions and the role of water in biomembrane structures Other chapters relate water to the methods of food preservation **Biocatalysts for Industry**

Jonathan S. Dordick,2013-03-09 The application of enzymes or whole cells fermentatively active or resting microbial plant or animal to carry out selective transformations of commercial importance is the central theme of industrial biocatalysis Traditionally biocatalysis has been in the domain of the life scientist or biochemical engineer However recent advances in this field have enabled biocatalytic processes to compete head on with and in some cases out perform conventional chemical processing Chemo biocatalytic systems are being developed thereby combining the most attractive features of bio catalysts

namely high specificity with those of chemical catalysts such as high reactivities and wide substrate specificities Hence synthetic chemists and chemical engineers are now beginning to use biocatalysts as highly selective reagents in chemical synthesis and processing This book is about biocatalysts and their past present and potential applications in the food pharmaceutical and chemical industries The concept of the book did not emanate from a meeting Rather it is a compilation of selected examples where biocatalysis either has already made a significant impact in the aforementioned industries or has the potential to make a substantial contribution I have been fortunate to have assembled contributions from world class researchers in the field of biocatalysis Their timely contributions are sincerely appreciated

Rheology of Industrial Polysaccharides: Theory and Applications R. Lapasin, 2012-12-06

Industrial uses of polysaccharides centre on their ability to thicken or structure many times their own weight of water or in other words to control the rheology of hydrated systems Until comparatively recently however objective characterisation of polysaccharide rheology except in a few specialist research laboratories was largely confined to compression of gels simple measurements of solution viscosity often in ill defined geometries and imitative tests intended to reflect product performance in specific areas of end use Several factors have combined to bring a wider range of rheological techniques into common use One is the increasing practical importance of systems that cannot adequately be described as solids or liquids such as weak gels and spreadable pastes In parallel routine characterisation of such systems has become economically feasible with the development of a new generation of comparatively inexpensive computer controlled instruments There has also been a change of emphasis from phenomenological description of product texture towards the use of rheological measurements to probe the underlying molecular and supramolecular structures and the processes by which they are formed As a result even the most pragmatic producers and users of industrial polysaccharides are probably now familiar with terms such as creep compliance stress overshoot and the ubiquitous G' and G'' although perhaps not fully understanding their precise meaning or practical significance A definitive text giving a rigorous description of the rheological approaches relevant to polysaccharide systems is therefore appropriate and timely Romano Lapasin and Sabrina Priel are to be congratulated for tackling the daunting but worthwhile task of producing such a volume

Steam Explosion Techniques Bonaventura Focher, Annamaria Marzetti, Vittorio Crescenzi, 1991

Steam explosion is a rapidly developing technique for the fractionation and modification of lignocellulosics and for the extraction of industrial polysaccharides This book is a primary integrated presentation of the fundamental and technological aspects of this process and provides an exhaustive discussion of its prospects for the future The main topics concern the kinetic and engineering aspects as well as the structure modifications of the substrates induced by the steam explosion process Applications in the pulping and textile industries in the bioconversion of wood and agricultural biomass and in polysaccharide extraction are widely discussed Potential developments of this technique in the activation of lignocellulosics for dissolving and the production of new textile fibers and films are also considered
