New Directions In Ophthalmic Research:

New Directions in Ophthalmic Research Marvin L. Sears, 1981-01-01 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), **Current Catalog** National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965-70 **Pathological Neurochemistry** Abel Lajtha, 2013-03-14 More than for any other volume of the Handbook of Neurochemistry the chapters in this volume on Pathological Neurochemistry deal with the interface of the laboratory bench with the patient's bedside. Most of the chapters reflect the confluence of basic scientists, clinical investigators and physicians. Considered here are many of the more important disorders that afflict the nerves, muscles, spinal cord and/or brain of mankind throughout the world. There are well over 500 such disorders. And our understanding of their nature and of measures for effective prevention or treatment depends significantly on application of the biochemical disciplines that characterize neurochemistry. Before World War II any attempt to compile a volume on pathological neurochemistry would have been largely descriptive and very rudimentary as such handbooks by Hans Winterstein 1929, Irvine Page 1937 and others demonstrate. But thanks to the many major advances in research and technology in the postwar decades we now stand at the threshold of understanding how to manage many of the major neurological disorders and we may expect more such delineations in the immediate decades ahead. Neurochemistry defined broadly has played a central role in this extraordinary turn of events progressing from what J. L. W. Thudichum in 1884 called objects of anxious empiricism to his anticipation of the proud exercise of chemical precision. Ophthalmology Myron Yanoff, Jay S. Duker, 2008-12-16 Based on valuable customer feedback Doctors Yanoff and Duker have streamlined their best selling reference Ophthalmology to zero in on just the clinical answers you need in day to day practice. This new edition presents unparalleled guidance on nearly every ophthalmic condition and procedure including the latest advances in the field such as optical coherence tomography (OCT), the ocular surface, new pharmacologic therapies, updated oculoplastic surgical techniques, the latest in refractive surgery and so much more. Discusses every aspect of clinical ophthalmology for complete coverage in a single volume. Uses 2250 full color illustrations that depict a wide range of ophthalmic techniques and disorders. Presents a more streamlined format to the printed text to help you focus on the clinically actionable information you need everyday. Discusses hot topics such as OCT, the ocular surface, glaucoma, testing, refractive surgery, advances in molecular biology and genetics, neuro-ophthalmology and retinal studies to keep you absolutely current. Provides enhanced coverage of cataracts including advances in phacoemulsification and surgical complications. Helps you make optimal use of the newest drug therapies including Anti VEGF treatment for wet ARMD and bevacizumab treatment for complications of diabetes. Offers authoritative guidance on the newest treatment options for cornea disorders including evolving ocular surface reconstruction techniques and new cornea procedures such as DSEK. Incorporates new chapters on increasingly popular aesthetic oculoplastic surgical techniques to help you meet today's demands. Update on Polymers for Ocular

Drug Delivery Atish S Mundada,2011-12-20 The eye is the most easily accessible site for topical administration of a medication. Drugs are commonly applied to the eye for localised action on the surface or in the interior of the eye. A major problem in ocular therapeutics is the attainment of an optimal drug concentration at the site of action. Poor bioavailability of drugs from ocular dosage forms is mainly due to the precorneal loss factors which include tear dynamics, non-productive absorption, transient residence time in the cul de sac and the relative impermeability of the corneal epithelial membrane. Due to these physiological and anatomical constraints, only a small fraction of the drug effectively 1% or even less of the instilled dose is ocularly absorbed. The effective dose of medication administered ophthalmically may be altered by increasing the retention time of medication in contact with the surface of the eye. To date, Pharmaceutical Technologists have tried to develop different novel formulations like gel, ocular inserts, collagen shields, implants, liposomes, nanoparticles, penetration enhancers and in situ gelling systems in order to increase the bioavailability and duration of the therapeutic action of ocular drugs and polymers. Polymers play an important role in all these approaches. This book provides detailed information regarding all such polymers which have been used and shown to be excellent in improving the bioavailability of ocular drugs.

Pharmacology of the Eye M.L. Sears,2012-12-06 Roots of the theory and practice of ocular pharmacology may be traced to the ancient Mesopotamian code of Hammurabi and then to several papyri reflecting the clinical interests of the Egyptians. The evolution of its art and science was irregularly paced until the nineteenth century when Kohler in 1884 proved the anesthetic effect of cocaine on the cornea and when Fraser, Laquer, Schmiedeberg, Meyer and others studied the pharmacology of the autonomic nervous system by way of observations of the pupil. Advances in the past few decades have been nothing short of explosive. How can the student physician or basic research scientist stay in touch with these electrifying studies? To help with the answer to this question, the authors set as their goal the development of increased understanding so that the student research scientist and ophthalmologist can cope with the latest discoveries. The authors want to narrow what appears to be an ever increasing gap between basic science and ophthalmology. The basic aspects of pharmacology have been presented in light of the natural physiology. In this regard, while distinctions among endogenous mechanisms, drug effects and the pathogenesis of disease are to be separately recognized, appreciation must be given to the concept that both the desirable and unwanted manifestations or functions caused by either disease or drugs must very often represent a quantitative change in normal metabolic pathways. Retinal Degeneration Robert E. Anderson, Joe G. Hollyfield, Matthew M. LaVail,2012-12-06 During the last few years, an explosion of information has come from human genetics and molecular and cell biological studies as to the genetic basis for a number of forms of inherited retinal degenerations. These disorders have plagued mankind for millennia because they take from otherwise healthy individuals the

precious gift of sight The fundamental advances in recent years have identified a number of genes involved in the groups of diseases which hopefully will lead to discoveries that may in the not too distant future allow the prevention and possible cure of some of these blinding eye disorders To foster a forum for discussions of studies on degenerative retinal disorders we convened a symposium on retinal degenerations in 1984 at the VIth International Congress of Eye Research Meeting held in Alicante Spain Because of the success of this meeting and the subsequent publication we have since organized a series of biennial satellite meetings on retinal degenerations for the ISER congresses held in Nagoya Japan 1986 San Francisco 1988 and Helsinki 1990 Each of these satellite symposium on retinal degenerations was accompanied by a published proceedings volume This volume is the fifth in this series and contains the proceedings of the Sardinia Symposium on Retinal Degeneration held September 15 20 1992 as a satellite meeting of the 10th International Congress of Eye Research

Spectroscopy of Biological Molecules: New Directions Jan Greve, Gerwin Jan Puppels, Cees Otto, 2012-12-06 Investigation of the structure and function of biological molecules through spectroscopic methods is a field rich in revealing clever techniques and demanding experiments It is most gratifying to see that the basic concepts are applied to more and more complex systems making feasible the study of the behaviour of whole systems in relation to molecular disturbances The analytical potential of spectroscopy and spectroscopic imaging enables species identification of bacteria and tissue recognition Clear opportunities for in vivo applications become apparent in the medical field The methods developed in biophysics start to generate spin off in the direction of biotechnology where in previous years we have seen this happen for biochemical techniques New directions are manifest Tools are being developed to investigate the behaviour of

single molecules in interaction with their environment Individual interactions can now be investigated and individual molecules in complexes can be visualized Processes that were previously unobservable as a result of ensemble averaging can now be investigated on a single molecule level Completely new information with regard to molecular behaviour is obtained in this way The insights amaze us and the prospect that this development will continue is exciting The 8th European Conference on the Spectroscopy of Biological Molecules is proud to have contributed to the dissemination of these new directions This proceedings book is an appropriate reflection of the progress obtained so far in the spectroscopy of biological molecules

Effects of Changes in Stratospheric Ozone and Global Climate James G. Titus,1986 *Scientific Directory and Annual Bibliography* National Institutes of Health (U.S.),1982 **Biochemistry of the Eye** Elaine R. Berman,2013-11-22 My first introduction to the eye came more than three decades ago when my close friend and mentor the late Professor Isaac C Michaelson convinced me that studying the biochemistry of ocular tissues would be a rewarding pursuit I hastened to explain that I knew nothing about the subject since relatively few basic biochemical studies on ocular tissues had appeared in the world literature Professor Michaelson assured me however that two books on eye biochemistry had already been written One of them a beautiful monograph by Arlington Krause 1934 of Johns Hopkins Hospital is well worth reading even today for its historical perspective The other published 22 years later was written by Antoinette Pirie and Ruth van Heyningen 1956 whose pioneering achievements in eye biochemistry at the Nuffield Laboratory of Ophthalmology in Oxford England are known throughout the eye research community and beyond To their credit are classical investigations on retinal corneal and lens biochemistry beginning in the 1940s and continuing for many decades thereafter Their important book written in 1956 on the Biochemistry of the Eye is a volume that stood out as a landmark in this field for many years In recent years however a spectacular amount of new information has been generated in ocular biochemistry Moreover there is increasing specialization among investigators in either a specific field of biochemistry or a particular ocular tissue **Annual Report - National Eye Institute** National Eye Institute,1982 **The Microenvironment and Vision** Joel B. Sheffield,S.Robert Hilfer,2012-12-06 The eye has fascinated scientists from the earliest days of biological investigation The diversity of its parts and the precision of their interaction make it a favorite model system for a variety of developmental studies The eye is a particularly valuable experimental system not only because its tissues provide examples of fundamental processes but also because it is a prominent and easily accessible structure at very early embryonic ages In order to provide an open forum for investigators working on all aspects of ocular development a series of symposia on ocular and visual development was initiated in 1973 A major objective of the symposia has been to foster communication between the basic research worker and the clinical community It is our feeling that much can be learned on both sides from this interaction The idea for an informal meeting allowing maximum exchange of ideas originated with Dr Leon Candeub who supplied the necessary driving force that made the series a reality Each symposium has concentrated on a different aspect of ocular development Speakers have
