book is a collection of eight non fiction short stories or essays where the characters are the places some of which appear more than once usually as bit part players occasionally as the main protagonist Preceded by a prologue describing Britain s prehistory as a European peninsula each essay covers a fixed period in the history of the development of Britain s settlement patterns sometimes long more often quite short beginning around 2 500 BC and ending about one hundred years in the future Nick Green chose those periods that are particularly instructive in revealing how settlement patterns come to exist in the form they do and how they might develop in the future Settlement patterns are not just about where a place is but about how that place relates to others They wax and wane with circumstance and around each settlement s fixed core the patterns of living and working shift constantly driven by forces beyond the control of any individual town or city or village From Bronze Age communities to computer simulations from the mediaeval wool trade to the hyper networked society from Viking invasions to the post industrial era the essays cover a broad sweep of history They appear in chronological order but are not intended to provide a continuous linear historical narrative nor do they each essay is freestanding so they can be read in whatever order the reader prefers *Wessex from 1000 AD* J.H. Historical Geography ,1991 *The English Reformation and the Laity* Caroline Litzenberger,2002-05-16 This book examines the effects of the English Reformation on the full spectrum of lay religion from 1540 to 1580 through an investigation of individuals and parishes in Gloucestershire Rather than focusing on either the acceptance of Protestantism or the demise of the traditional Catholic religion as other historians have done it considers all shades of belief against the backdrop of shifting official religious policy The result is the story of responses ranging from stiff resistance to eager acceptance creating a picture of the religion of the laity which is diverse and complex but also layered as parishes and individuals expressed their faith in ways which reflected the institutional or personal nature of their piety Finally while the book focuses on Gloucestershire it reveals broad patterns of beliefs and practices which could probably be found all over England

Trade, Urbanisation and the Family David Nicholas, 2024-10-28 Flanders best known for its large cities and export grade woollen cloth is the setting for these articles Professor Nicholas here emphasises the region's broader importance in the economy of medieval Europe as a focus of demand for grain and industrial raw materials Imports to supply the bloated internal markets were more important in establishing the Flemish cities and creating the capital base of their elites than were cloth exports which by the 14th century were being undercut by competitors from England and Brabant The second part of the book looks at the turbulent domestic politics of the Flemish cities conditioned by a network of nuclear and extended families whose personal antagonisms and heightened consciousness of honour led to decimating vendettas of a severity once associated mainly with Italy It also examines the mix of urban and rural interests that characterised the elite showing for instance that the famous van Artevelde were as noteworthy in the swamps of northeastern Flanders as in the streets of Ghent

Barriers to Growth Eric L. Jones, 2020-04-04 This book deals sequentially with major impediments to economic growth and their slow dissolution It is original and quite different from standard economic history which has always sought for one prime mover of the industrial revolution after another These supposed positive forces are usually depicted as novel and little reference is made to inertia Instead the barriers dealt with here run in the first section from early misallocations of resources to nineteenth century reforms which of their nature indicate the problems to be overcome The second section deals with more physical impediments and shocks such as floods and settlement fires These too are ignored in ordinary treatments which this book will supplement or even replace It will be of interest to academic economic historians and practitioners of neighbouring subjects such as economists historians historical geographers and of course their students
