Special Issue "New" Instruments of Environmental Governance? Andrew J. Jordan, 2003

Environmental Governance in Europe Rüdiger K.W. Wurzel, Anthony R. Zito, A. J. Jordan, 2013-01-01 This path breaking book written by three well known experts makes an extremely valuable contribution to the study of new environmental policy instruments as well as to much wider theoretical debates about governance policy innovation learning and transfer Drawing on an unrivalled comparative empirical study of five different jurisdictions it manages to make many new points about issues that many of us thought had already been settled Martin J. Nicke Free University of Berlin and former deputy chair German Advisory Council on the Environment Germany Much more than a study of environmental policy instruments this book ranges widely and authoritatively over the government to governance debate theories of policy change regulation policy transfer and policy learning Its lessons and conclusions are relevant and timely well beyond the European context of its case studies and it will be essential reading for public policy scholars everywhere for some time to come Jeremy Rayner University of Saskatchewan Canada This book represents a very rare achievement in that it combines detailed and up to the minute empirical analysis of environmental policy over the past four decades with a sophisticated discussion and critique of current theoretical issues in comparative and policy studies generally It unfolds with a keen eye towards understanding the temporal dimensions of policy dynamics both in the specific policy field examined but also in terms of testing key analytical concepts Taken as a whole it provides the most detailed empirical assessment to date of the general government to governance hypothesis with significant implications for policy and governance studies in general Michael Howlett Simon Fraser University Canada and National University of Singapore This book fills an important gap in the environmental governance literature addressing governance at a lower level of abstraction than other texts and examining how it plays out in relation to specific modes and instruments of governing It also contributes towards governance theory building efforts through the development of an empirically relevant analytical framework In so doing it provides a firm underpinning for assessing whether to what extent and in what

ways there has been a transition from government towards governance in environmental policy Neil Gunningham Australian National University Theoretically sophisticated and empirically rich this book provides an overview of the introduction development and use of new policy instruments and new modes of environmental governance in the European context taking into account both national and European Union experiences This is a welcome addition to the field Miranda Schreurs Environmental Policy Research Centre and Free University of Berlin Germany European governance has witnessed dramatic changes in recent decades By assessing the use of new environmental policy instruments in European Union countries including the United Kingdom Germany the Netherlands and Austria this timely book analyses whether traditional forms of top down government have given way to less hierarchical governance instruments which rely strongly on societal self steering and or market forces The authors provide important new theoretical insights as well as fresh empirical detail on why and in what form these instruments are being adopted within and across different levels of governance along with analysis of the often overlooked interactions between the instrument types Providing important new theoretical insights into the governance debate by combining institutionalist and policy learning transfer approaches this book will be invaluable for both undergraduate and postgraduate students The analytical insights as well as a thorough empirical assessment of the use of environmental policy instruments in practice will prove essential for environmental policy specialists practitioners

Decentralization in Environmental Governance Christian Zuidema, 2016-10-04 Decentralization in Environmental Governance is a critical reflection on the dangers and risks of governance renewal warning against one sided criticism on traditional command and control approaches to planning The book formulates the arguments that support when and how governance renewal might be pursued but this attempt is not just meant for practitioners and scholars interested in governance renewal It is also useful for those interested in the challenge of navigating a plural landscape of diverse planning approaches which are each rooted in contrasting theoretical and philosophical positions The book develops a strategy for making argued choices between alternative planning approaches despite their theoretical and philosophical positions It does so by revitalizing the idea that we can contingently relate alternative planning approaches to the circumstances encountered It is an idea traced to contingency studies of the mid and late 20th century reinterpreted here within a planning landscape dominated by notions of uncertainty complexity and socially constructed knowledge This approach called Post contingency is both a theoretical investigation of arguments for navigating the theoretical plurality we face and an empirical study into renewing environmental governance Next to its theoretical ambitions Decentralization in Environmental Governance is practical in offering a constructive critique on current processes of governance renewal in European environmental governance Everyday Agri-Environmental Governance Jérémie Forney, Dana Bentia, Angga Dwiartama, 2024-07-05 Revitalising the way the social sciences question agri environmental governance this book introduces the everyday governance approach as a means to improving the sustainability of agriculture and food systems The everyday refers to

localised practices specific networks and practical norms that emerge in a process of interaction translation and reinterpretation The authors build this approach on assemblage thinking and theory which focuses on the collective production of the social through complex sets of connections For this reason assemblage thinking becomes a particularly productive guide in exploring how everyday governance is co produced in the interaction between numerous social processes involving a diversity of actors and instruments The authors navigate between original and contrasting case studies from Switzerland Indonesia and the European Union in order to reorient attention to the transformative nature of governance which they locate along four different dimensions of the everyday 1 the interdependence of instruments within a wider governance assemblage 2 the uncertainty and unpredictability of effects in agri environmental governance 3 the distributed nature of agency and its implication for power relations 4 the importance of capacities in the transformation of agri food systems This book calls for a redesigning of agri environmental governance that should move away from the setting of fix and precise objectives and solutions and rather aim for a consolidation of sound foundations on which desirable futures can emerge The book will be an essential read for students and scholars interested in sustainable agriculture and food systems governance modes and approaches and sustainability more broadly The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license
