Radar Signals:

Radar Signals Charles Cook, 2012-12-02 Radar Signals An Introduction to Theory and Application introduces the reader to the basic theory and application of radar signals that are designated as large time bandwidth or pulse compression waveforms Topics covered include matched filtering and pulse compression optimum predetection processing the radar ambiguity function and the linear frequency modulation waveform and matched filter Parameter estimation and discrete coded waveforms are also discussed along with the effects of distortion on matched filter signals This book is comprised of 14 chapters and begins with an overview of the concepts and techniques of pulse compression matched filtering with emphasis on coding source and decoding device The discussion then turns to the derivation of the matched filter properties in order to maximize the signal to noise ratio analysis of radar ambiguity function using the principle of stationary phase parameter estimation and the method of maximum likelihood and measurement accuracies of matched filter radar signals Waveform design criteria for multiple and dense target environments are also considered The final chapter describes a number of techniques for designing microwave dispersive delays This monograph will be a useful resource for graduate students and practicing engineers in the field of radar system engineering
