Introduction to Food Engineering R. Paul Singh, Dennis R. Heldman, 2001-06-29 Food engineering is a required class in food science programs as outlined by the Institute for Food Technologists (IFT). The concepts and applications are also required for professionals in food processing and manufacturing to attain the highest standards of food safety and quality. The third edition of this successful textbook succinctly presents the engineering concepts and unit operations used in food processing in a unique blend of principles with applications. The authors use their many years of teaching to present food engineering concepts in a logical progression that covers the standard course curriculum. Each chapter describes the application of a particular principle followed by the quantitative relationships that define the related processes, solved examples, and problems to test understanding. The subjects the authors have selected to illustrate engineering principles demonstrate the relationship of engineering to the chemistry, microbiology, nutrition, and processing of foods. Topics incorporate both traditional and contemporary food processing operations. Low-Temperature Plasma Chemical Engineering Yi Cheng, Xin Tu, 2025-11-01 *Low Temperature Plasma Chemical Engineering* bridges the gap between the plasma and chemical engineering communities. It includes principles and mechanisms of plasma process intensification, novel plasma reactor and process design, and process optimization. The book highlights various plasma chemical processes such as oxidation of volatile organic compounds (VOCs), methane reforming, CO₂ conversion, and biomass tar reforming. It also discusses nitrogen fixation, plasma agriculture, and plasma biotechnology. The book further explores advanced oxidation processes, organic synthesis in microchannel reactors, electrostatic precipitation, plasma pyrolysis of coal into acetylene, synthesis of nanomaterials and ultrafine powders, and solid waste treatment. It brings together state-of-the-art research and development in advanced low temperature plasma chemical engineering technologies. It also addresses challenges and future perspectives in this emerging area. *Low Temperature Plasma Chemical Engineering* is a valuable resource for scientists, engineers, technicians, and students from various research backgrounds including plasma physics, plasma chemistry, chemical
