Radiobiological Equivalents Of Chemical Pollutants:

Radiobiological Equivalents of Chemical Pollutants International Atomic Energy Agency, 1980 **Environmental Health Perspectives** ,1984 Behavioral Effects of Microwave Radiation Absorption ,1985 **Hazard Assessment Of Ethylene Oxide** Leon Golberg, 2018-01-18 Hazard assessment of EO has involved consideration of the chemical composition characteristics and reactivity of this material Teratogenic effects of EO are only seen under extreme conditions that render the result questionable Reproductive effects or minor severity occur only at high levels of exposure Epidemiological and other studies of occupational exposure to EO in men and women have revealed no substantial evidence of potential to produce cancer in the work place **Radiobiological Equivalents of Chemical Pollutants** International Atomic Energy Agency, 1980 **Nuclear Fallout Effects on Agriculture, 1970-March 1986** Charles N. Bebee, 1986 *The Use of Human Cells for the Evaluation of Risk from Physical and Chemical Agents* Amleto Castellani, 2013-06-29 In this volume are collected 30 papers 9 round table discussions and 11 communications presented at the ASI Course on The use of human cells for the evaluation of risk from physical and chemical agents sponsored by NATO and organized by ENEA The aim of the Course was to present different scientific approaches and technical advices in order to get dose effect relationships which are the basis for risk evaluation The scientific background which is behind this approach was extensively discussed Emphasis has been given to the use of human cells or human data in order to attempt to have a correct and realistic evaluation of the damage in humans There are many criticisms on the use of animal data for human risk evaluation because of differences between species and between strains within the same species differences in metabolism activation processes and DNA repair ability makes uncertain the extrapolation of animal data to humans Also data obtained using specific strains or highly inbred strains in order to reduce the variance are not applicable due to the heterogeneity of the human population connected with individual responses In this respect only the use of human cells enable us to detect the individual variability and to identify sensitive subpopulations that would be at greater risk My appreciation to Pieranita and Alberto Castellani for the assistance during the meeting and to Giuseppe Biondi for his help in some of the editorial work **Toxicology of industrial compounds** H. Thomas, 1995-11-21 A large number of chemical compounds are constantly being introduced and produced both to assist and ease modern human life Among these chemicals industrial compounds represent a particular fraction of chemicals which are not intended for use in biological systems but to which humans may be accidentally exposed whether in the workplace by product application or via the environment Industrial chemicals as opposed to pharmaceuticals and agrochemicals are in many cases subjected only to a very basic examination of handling safety and may lack further toxicity testing This implies that essentially nothing is known about their bioavailability metabolism excretion and toxicological properties unless problems arise Covering the investigation of industrial chemicals this book focuses on their individual structure biological fate potential toxicity to mammals and the molecular mechanisms possibly underlying their

adverse effects by highlighting the use and significance of experimental toxicology Special emphasis is placed on mechanistic aspects in the safety assessment of industrial compounds in addition to current regulatory and legal considerations

Biological Reactive Intermediates IV Charlotte M. Witmer, Robert R. Snyder, David J. Jollow, George F. Kalf, James J. Kocsis, 2013-03-09 The finding that chemicals can be metabolically activated to yield reactive chemical species capable of covalently binding to cellular macromolecules and the concept that these reactions could initiate toxicological and carcinogenic events stimulated a meeting by a small group of toxicologists at the University of Turku in Finland in 1975 Jollow et al 1977 The growing interest in this field of research led to subsequent symposia at the University of Surrey in England in 1980 Snyder et al 1982 and the University of Maryland in the U S A in 1985 Kocsis et al 1986 The Fourth International Symposium on Biological Reactive Intermediates was hosted by the Center for Toxicology at the University of Arizona and convened in Tucson Arizona January 14 17 1990 Over 300 people attended There were 60 platform presentations by invited speakers and 96 volunteer communications in the form of posters were offered These meetings have grown from a small group of scientists working in closely related areas to a major international series of symposia which convene every five years to review and place in context the latest advances in our understanding of the formation fate and consequences of biological reactive intermediates The Organizing Committee Allan H Conney Robert Snyder Co chairman and Charlotte M Witmer Rutgers University Piscataway NJ David J Jollow Co chairman Medical University South Carolina Charleston SC 1 Glenn Sipes Co chairman University of Arizona Tucson AZ James J Kocsis and George F *Chemical Abstracts Service Source Index* American Chemical Society. Chemical Abstracts Service, 1907 A key source to journal and conference abbreviations in the sciences Although it focuses on chemistry other scientific and engineering disciplines are also well represented In addition to the abbreviation and full title each entry also contains publishing info title changes language and frequency of publication and libraries owning that title Over 130 000 entries representing more than 70 000 publications dating back to 1907 are included
