## **Radiocontrast Agents Handbook Of Experimental Pharmacology Volume 73:**

Radiocontrast Agents M. Sovak, 2012-12-06 Contrast media are drugs by default Had there been no default there would be no need for a related pharmacology and thus no need for this book Radiographic contrast media CM are substances whose primary purpose is to enhance diagnostic information of medical imaging systems The position of CM in pharmacology is unique First there is the unusual requirement of biological inertness An ideal CM should be completely biologically inert i e stable not pharmacologically active and efficiently and innocuously excretable Because they fail to meet these requirements CM must be considered drugs The second unusual aspect of CM is that they are used in large quantities their annual production being measured in tens of tons It is not in spite of but because of the increased use of new radiographic systems computed tomography digital radiography etc that consumption is on the rise And it is not likely that the other emerging imaging modalities NMR ultrasonography etc will displace radiographic CM soon it is quite probable that these remarkable compounds will continue to play an active role in diagnostic imaging in the foreseeable future **National Library of**

Extracellular MRI and X ray contrast agents are characterized by their pharmacokinetic behaviour After intravascular injection their plasma level time curve is characterized by two phases The agents are rapidly distributed between plasma and interstitial spaces followed by renal elimination with a terminal half life of approximately 1 2 hours They are excreted via the kidneys in unchanged form by glomerular filtration Extracellular water soluble contrast agents to be applied for X ray imaging were introduced into clinical practice in 1923 Since that time they have proved to be most valuable tools in diagnostics They contain iodine as the element of choice with a sufficiently high atomic weight difference to organic tissue As positive contrast agents their attenuation of radiation is higher compared with the attenuation of the surrounding tissue By this contrast enhancement X ray diagnostics could be improved dramatically In 2 4 6 triiodobenzoic acid derivatives iodine is firmly bound Nowadays diamides of the 2 4 6 triiodo 5 acylamino isophthalic acid like iopromide Ultravist Fig 1 are used as non ionic neutral X ray contrast agents in most cases 1 **Pharmacology of Asthma** Clive P. Histamine and Histamine Antagonists Börje Uvnäs, 2012-12-06 Together with the two previous volumes of the Handbook of Experimental Pharmacology on histamine and antihistamines the present publication yields a picture of a still rapidly developing field of research New techniques and new experimental

approaches have brought us new knowledge and deeper insight into the biomedical significance of histamine even if many questions remain to be answered about the functional and medical implications of this old biogenic amine. The present volume covers the progress in histamine research during the past two decades. A significant chapter concerns techniques for histamine determination. As the result of a consensus meeting in Munich in December 1988 a panel of eminent specialists arrived at common recommendations as to the usefulness of the available histamine assays for the most common experimental biomedical conditions. The heterogeneity of mast cells with great differences in their reactivity to various stimuli has become apparent not only among species but also among the tissues of a species. New information is presented about the mechanism of exocytosis. The old questions about the role of histamine in the mechanism of gastric secretion and in cardiovascular and respiratory functions have been studied with new techniques and the role of H<sub>1</sub> and H<sub>2</sub> receptors discussed. New observations have been made on the occurrence and possible functions of histaminergic neurons and histamine receptors in CNS where a new type of receptor the H<sub>3</sub> seems to be widely represented.

**The Cholinergic Synapse** Victor P. Whittaker, 2012-12-06

One of the most impressive works of scholarship in the field of experimental pharmacology has been the Heffter Heubner Handbuch der experimentellen Pharmakologie internationalized some years ago under the title Handbook of Experimental Pharmacology and kept up to date by a series of numbered Ergänzungswerke or supplementary volumes which have now replaced in importance the original Handbuch. These volumes constitute a valuable and continuously updated multi author review series of topics important in modern pharmacology and allied sciences. The Editorial Board of the Handbook invited me 2 years ago to undertake as subeditor the preparation of a new volume entitled The Cholinergic Synapse. A previous volume in this series vol 15 Cholinesterases and Anticholinesterase Agents edited by GEORGE KOELLE was published in 1963 and was far wider in scope than its title suggested it was in fact an authoritative summing up of the whole subject of cholinergic function and still has some value today as an account of the state of the art as it was at that time. Since then another excellent review of a specific cholinergic synapse has appeared in this series this was vol 42 Neuromuscular Junction edited by ELEANOR ZAIMIS and published in 1976. A third volume vol 53 Pharmacology of Ganglionic Transmission which appeared in 1980 and was edited by D A KHARKEVICH includes important aspects of autonomic cholinergic function.
