Radioprotectors And Anticarcinogens:

Radioprotectors and Anticarcinogens Oddvar F. Nygaard, Michael G. Simic, Janet Newlin Hauber, 1983-01-01

Radioprotectors Edward A. Bump, Kamal Malaker, 2021-12-24 It is essential to minimize damage to normal tissues during radiation therapy and many strategies have been employed in finding the best methods for radioprotection. This book integrates chemical, biological, and clinical perspectives on these strategies and developments, providing a comprehensive treatise. It emphasizes new concepts in radioprotection aiming to inspire further basic science and clinical progress in radioprotector research. *Radioprotectors: Chemical, Biological, and Clinical Perspectives* includes the following topics: Early research on radioprotectors; WR 2721, an aminothiol prodrug, as a radioprotector; New results with naturally occurring thiols; Nitroxides as effective radioprotectors in vitro and in vivo; Radioprotection observed with radical scavengers or antioxidants; Bone marrow radioprotection with cytokines and biological modifiers; Multiple mechanisms of altering radiation response by eicosanoids; Vascular response to radiation and the importance of vascular damage to normal tissue; Modifiers of radiation-induced apoptosis; Survey of clinical trials with radioprotectors. Radiation biologists and oncologists, cancer researchers, and toxicologists will benefit from the findings discussed and strategies for future research. [Anticarcinogenesis and Radiation Protection](#) Peter Cerutti, 2012-12-06 This book is based on the invited and contributed papers presented at the 2nd International Conference on Anticarcinogenesis and Radiation Protection held at the National Bureau of Standards, Gaithersburg, Maryland, USA, on March 8-12, 1987. The conference documented developments that have taken place in areas that were addressed during the first conference in 1982. A number of new topics such as biological response modifiers were included because of their emerging relevance to anticarcinogenesis and radiation protection. The organization of the material in this book does not follow the conference program; rather, we have attempted to provide a different sequence for didactic reasons. The aim of the conference, which is reflected in this book, was to promote further development of mechanistic approaches to cancer prevention and treatment based on recent progress in molecular biology and free radical chemistry. At the basis of carcinogenesis lie changes in the dynamics of growth and differentiation of specific cell subpopulations in the target tissue. These changes are brought about by selective toxicity and modulation of gene expression that are induced by xenobiotic carcinogens and affected by physiological and genetic factors. The book deals with oxidative stress and molecular damage caused by radiation and chemical pro-oxidants and their role in carcinogenesis and it discusses mechanisms of deregulation of the expression of oncogenes and other genes involved in carcinogenic initiation and promotion.

Anticarcinogenesis and Radiation Protection 2 O.F. Nygaard, A.C. Upton, 2012-12-06 The dramatic decrease in the incidence of stomach cancer in industrialized countries during the past 50 years, which is yet to be fully explained, and the observation that carcinogenesis in laboratory animals can be inhibited by antioxidants, retinoids, and caloric restriction, among other influences, challenge us to press on in the search for practical means to prevent cancer. It is in relation to this goal that

the studies summarized in this book have special significance This book is based on the invited and contributed papers presented at the Third International Conference on Anticarcinogenesis and Radiation Protection held on October 15-21 1989 in Dubrovnik Yugoslavia They cover a broad range of investigations into the mechanisms and inhibition of carcinogenesis In keeping with recent advances in our understanding of the importance of oncogenes and tumor suppressor genes in carcinogenesis many of the reports focus on mutations and related changes at the level of DNA At the same time however other reports deal with nutritional immunological endocrinological and epidemiological aspects In all the various reports address carcinogenesis and its inhibition at virtually every level of biological organization Included in this compendium are timely reviews of diverse and promising research strategies for cancer prevention as pursued by investigators in different parts of the world The Organizers of the Conference are grateful to the many scientists who have contributed to the volume as well as to the sponsors of the Conference without whose generous support this book would not have been possible

Antimutagenesis and Anticarcinogenesis Mechanisms Delbert M. Shankel, Philip E. Hartman, Tsuneo Kada, Alexander Hollaender, Claire M. Wilson, Gregory Kuny, 2013-03-13 **Biochemical Modulation of Anticancer Agents:**

Experimental and Clinical Approaches Frederick A. Valeriote, L.O. Baker, 2012-12-06 Biochemical Modulation at the present time defines an area of study in which the intracellular metabolism of a given anti cancer agent is modulated usually by a noncytotoxic agent or a cytotoxic agent at sufficiently low dosage to make it non cytotoxic in order to either increase the effectiveness of the particular agent against tumor cells or decrease its cytotoxicity against normal cells The major focus of modulation has been the agents 5 fluorouracil FUra arabinofuranosylcytosine ara C methotrexate MTX and a few alkylating agents The major thrust of the studies has been to increase the flow of the anticancer agent along the pathway responsible for the formation of the cytotoxic species for example FUra to FUTP or ara C to ara CTP While in most cases the application of research results to clinical trials does not require the subsequent expertise of the laboratory researchers application of biochemical modulatory schemes to clinical protocols necessitate a dramatic break with the past procedures As shown in the laboratory clinical loop below close collaboration between the laboratory and clinical investigator is essential While the laboratory REDEFINE TECHNOLOGY TESTS OR QUESTIONS FOR FURTHER THERAPEUTIC ADVANCE CLINICAL EXPERIMENTAL PROTOCOL LABORATORY RESEARCH STUDIES DEFINE AND TEST APPROPRIATE SCIENTIFIC PARAMETERS results define rationally based regimens it is essential that the clinical protocols contain the requirement that clinical material either tumor or normal tissues be sampled to determine whether the biochemical modulation being proposed is in fact being accomplished **Antimutagenesis and Anticarcinogenesis Mechanisms II** Yukioki Kuroda, Delbert M. Shankel, Michael D. Waters, 2012-12-06 The papers are arranged in eight sections addressing antimutagens in food antimutagens and anticarcinogens in environmental toxicology free radicals antitumor initiators antitumor promoters aspects of mammalian and human genetics molecular aspects of mutagenesis and antimutagenesis and

oncog **Biotic Type Antioxidants: the prospective search area for novel chemical drugs** Gennady Zaikov, Parfenov, 2018-12-19 The discovery of molecular and cellular mechanisms of pathology together with the present data on drug treatment result in enhanced drug design and testing The known mechanisms of biological activity as displayed by ascorbic acid and other natural reductones are the reason that they are considered to be physiologically compatible antioxidants many of which are trace elements in food The pharmacological potential of natural antioxidants may be enhanced by chemical modification Biotic antioxidants possess an important potential to be a reliable basis of the development of new multipurpose drugs within the framework of existing technological structures This book shows approaches for possible use of these natural antioxidants In particular such an approach is described for the case of the design of superoxide dismutase models with anti tumour activity **Progress in Nucleic Acid Research and Molecular Biology** ,1988-11-01 Progress in Nucleic Acid Research and Molecular Biology **Cellular Interactions by Environmental Tumor Promoters** Hirota Fujiki, 1984-12 Considerable progress in our understanding of tumor promotion has been made by cancer researchers throughout the world In addition scientists in several other disciplines have made significant contributions in elucidating the pleiotropic effects of tumor promotion This international symposium was specifically convened to review research progress in these areas and to consider the relevance of these findings to human cancer causation and prevention The proceedings include the contributions of leading researchers from Europe Japan and the USA Several papers report the exciting progress made in understanding how tumor promoters act at the cellular and biochemical levels Elsewhere attention is focused on tumor promotion as an important phase in the occurrence of certain human tumors It is hoped that advances in the understanding of the mechanism of tumor promotion in experimental systems will lead to new and effective approaches to human cancer prevention The proceedings will be of interest and value to researchers working in cancer research biochemistry molecular genetics mutagenesis and cell biology
